The OSIM State Health System Innovation Plan (SHSIP)

What is the State Health System Innovation Plan?

The State Health System Innovation Plan (SHSIP) puts forth a new healthcare model to move Oklahoma into value-based purchasing of healthcare. It is the final deliverable of the State Innovation Model (SIM) grant and is scheduled to be submitted to the Centers for Medicare and Medicaid Services (CMS) on March 31, 2016. The SHSIP is being posted for a 30 day public comment period.

How was the SHSIP developed?

The SHSIP is the culmination of a year of stakeholder engagement and technical assistance associated with the SIM grant, which was directed by the Center for Health Innovation and Effectiveness within the Oklahoma State Department of Health. The SIM grant procured five contractors and vetted 15 deliverables through the OSIM/OHIP workgroups to help inform the development of the SHSIP. Stakeholder feedback, both one-on-one and through workgroups, ultimately guided—and will continue to guide— the SIM process and the proposed model.

What does the SHSIP contain?

There are 11 sections in the SHSIP:

- Description of the State Healthcare Environment
- Report on Stakeholder Engagement and Design Process Deliberations
- Health System Design and Performance Objectives
- Value-Based Payment and/or Service Delivery Model
- Plan for Healthcare Delivery System Transformation
- Plan for Improving Population Health
- Health Information Technology Plan
- Workforce Development
- Financial Analysis
- Monitoring and Evaluation Plan
- Operational Plan

Are all of the SHSIP sections complete?

The Financial Analysis, Monitoring and Evaluation Plan, and the Operational Plan are not complete and will be released in mid to late February 2016. As they are completed, they will be incorporated into the SHSIP and posted for public comment. Additionally, every section is currently undergoing stakeholder review.

How do I give my feedback on the SHSIP?

There is a public comment box below the SHSIP link on the SIM website. This is where all public comment on the plan will be received. Comments will be received through March 15, 2016.

Highlights of the State Health System Innovation Plan

- **Summary level data and information** regarding state population status, insurance payer profiles, high cost services, and current health initiatives in the Description of the State Healthcare Environment

- A summary of the **stakeholder engagement process**, including those consulted, in the Report on Stakeholder Engagement and Design Process Deliberations

- The **statewide system and population health goals** for Oklahoma to meet by 2020 within the Health System Design and Performance Objectives

- A description of the proposal to move Oklahoma state purchased healthcare to **value-based Communities of Care organizations** in the Value-Based Payment and/or Service Delivery Model

- The list of proposed **multi-payer quality metrics** within the Value-Based Payment and/or Service Delivery Model

- The list and description of the proposed **episodes of care** within the Value-Based Payment and/or Service Delivery Model

- **Provider and health system resources** to support their transition into a value-based payment model within the Healthcare System Transformation plan

- How our current healthcare initiatives and proposed model will work together to **improve population health** within the Plan for Improving Population Health

- A proposed framework for **statewide health information technology interoperability** within the Health Information Technology Plan

- The current and future plans to create a well-trained and evenly disturbed **workforce** to meet the needs of healthcare transformation within the Workforce Development Plan
