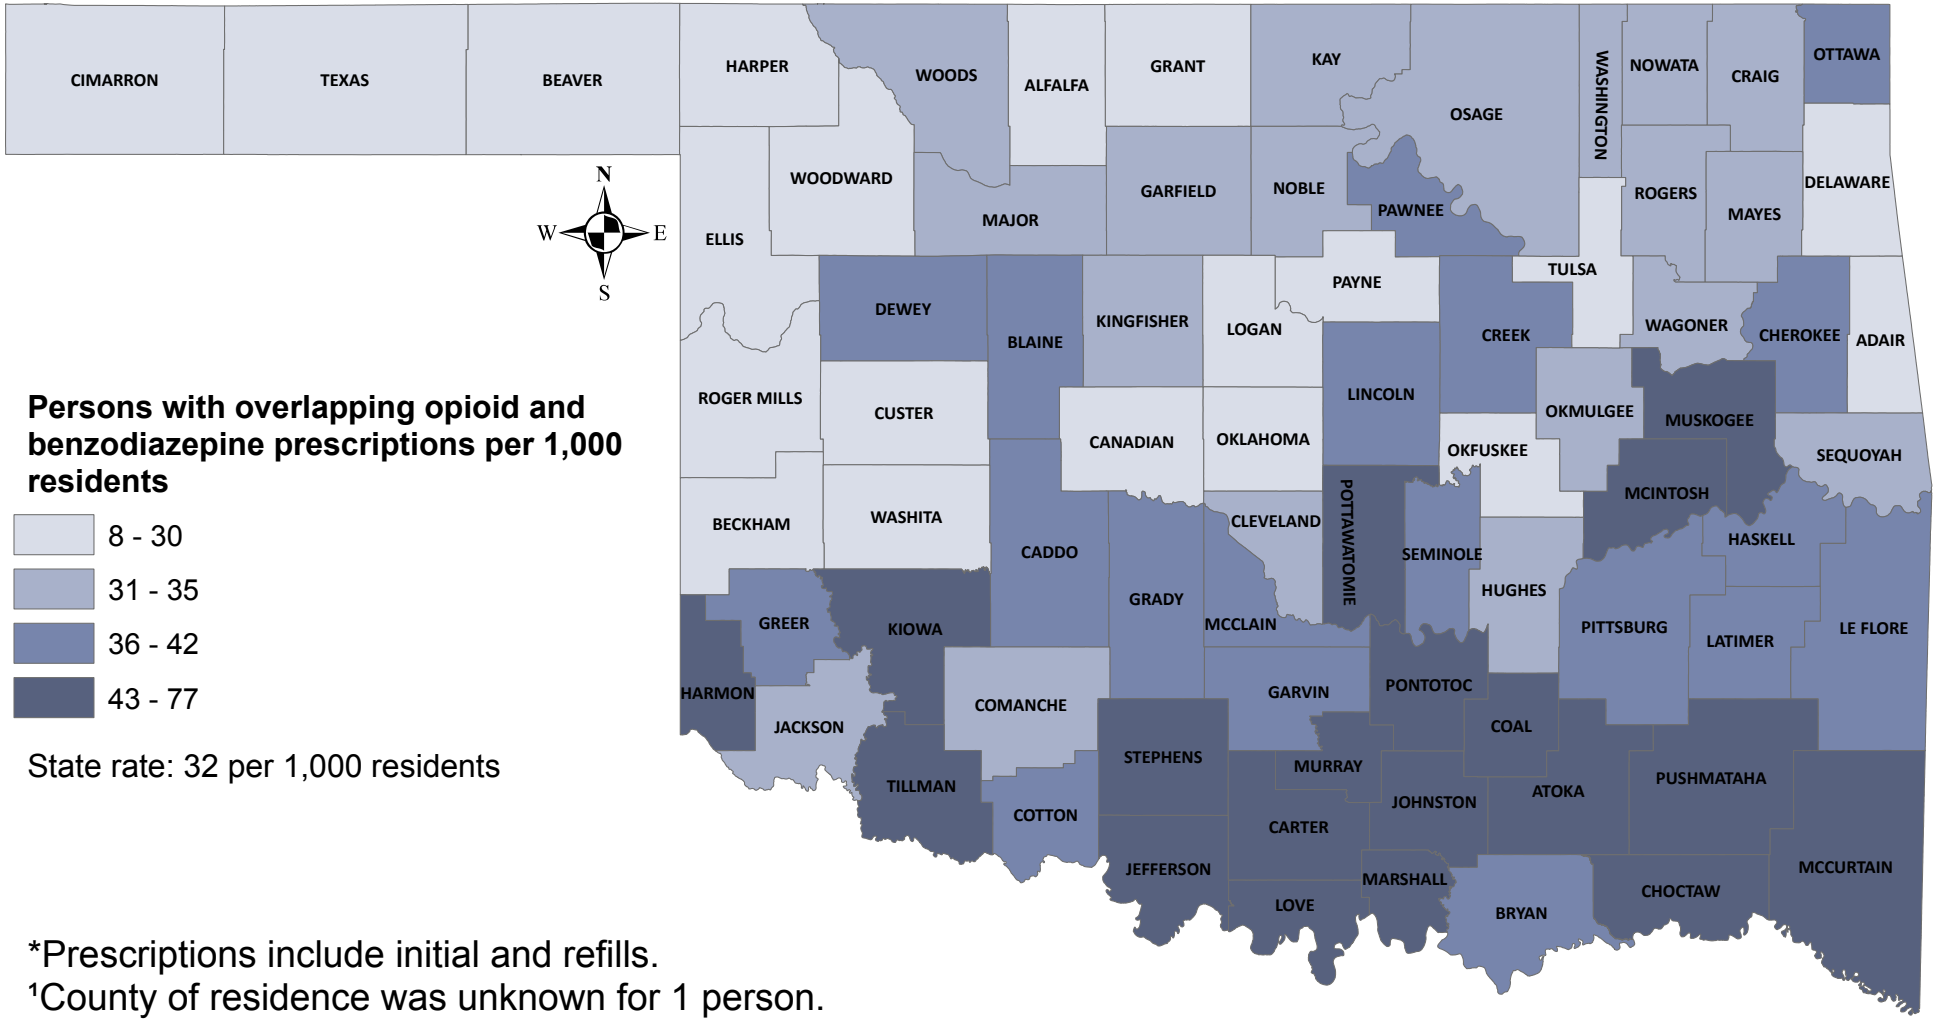
Number of Persons with Overlapping Opioid and Benzodiazepine Prescriptions* per 1,000 Residents by County of Residence[1]: Oklahoma, 2018

Map created: July 2019



Persons with overlapping opioid and benzodiazepine prescriptions per 1,000 residents

- 8 - 30
- 31 - 35
- 36 - 42
- 43 - 77

State rate: 32 per 1,000 residents

*Prescriptions include initial and refills.
[1]County of residence was unknown for 1 person.

This indicator includes select dispensed prescription opioids as entered into the Oklahoma Prescription Monitoring Program (PMP) system. All Buprenorphine products and veterinary prescriptions are excluded. Drugs not typically used in outpatient settings or otherwise not critical for calculating dosages in morphine milligram equivalents (MME), such as cough and cold formulations including elixirs and combination products containing antitussives, decongestants, antihistamines, and expectorants have been excluded using the CDC's National Center for Injury Prevention and Control MME file.

Data Source: Data and maps were analyzed and compiled from the Oklahoma PMP AWARxE system by the Oklahoma Department of Mental Health and Substance Abuse Services, Decision Support Services and Prevention Services.
