1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as (Nx200,000)/EH where:
N = number of injuries and illnesses,
EH = total hours worked by all employees during the calendar year, and
200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

OKLAHOMA	1961	5.3	1.1	0.3	3.8
TULSA	2264	10.2	1.6	2.3	6.4

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as (Nx200,000)/EH where:
N = number of injuries and illnesses,
EH = total hours worked by all employees during the calendar year, and
200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

Source: Oklahoma Department of Labor Statistical Research and Analysis Division.

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as (Nx200,000)/EH where:
N = number of injuries and illnesses,
EH = total hours worked by all employees during the calendar year, and
200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

N.R. = Non-respondent

Table 6: Cities Occupational Injury and Illness Incidence Rates[1] by Size Class for 2008

City/Town	2008 Reported Employment	Total Recordable Cases	Cases With Days Away From Work Cases	Cases With Job Transfer Or Restriction	Other Recordable Cases

1. Incidence rates represent the number of injuries or illnesses per 100 full-time workers and were calculated as (Nx200,000)/EH where:
N = number of injuries and illnesses,
EH = total hours worked by all employees during the calendar year, and
200,000 = base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).
