

**2015 Edward Byrne Memorial Justice Assistance Grant (JAG) Program
Oklahoma District Attorneys Council
Program Narrative**

**1. STATE STRATEGY AND FUNDING PRIORITIES, AWARD PROCESS, AND
TIMELINE**

1A. Overview

Since 1986, the District Attorneys Council (DAC) has served as the state administering agency for the Edward Byrne Memorial Justice Assistance Grant (JAG) Program. The DAC utilizes a board that provides general oversight for the JAG Program, approves the state strategy, prioritizes purpose areas for funding, reviews grant proposals, and determines awards. Comprised of 17 voting and non-voting members, the Justice Assistance Grant (JAG) Board represents a cross section of state and federal criminal justice agencies in Oklahoma.

The following agencies have representatives that serve on the JAG Board:

Voting Members

- A District Attorney
- Office of Juvenile Affairs
- Oklahoma Association of Chiefs of Police
- Oklahoma Bureau of Narcotics and Dangerous Drugs Control
- Oklahoma Department of Corrections
- Oklahoma Department of Education
- Oklahoma Department of Mental Health and Substance Abuse Services
- Oklahoma Department of Public Safety
- Oklahoma District Attorneys Council
- Oklahoma Sheriffs' Association
- Oklahoma State Bureau of Investigation
- The Office of the Attorney General
- The Office of the Governor

Non-Voting Members

- Drug Enforcement Agency
- U.S. Attorneys for the Western, Eastern, and Northern Districts of Oklahoma

Through the dedicated and knowledgeable representatives that serve on the JAG Board, strategies and approaches have been developed and executed to prevent, as well as control, drugs, violent crimes, and serious offenders. In this capacity, the Board leverages federal funding through the JAG Program in order to marshal the State's resources in responding to these criminal justice issues.

In 2012, the Justice Assistance Grant Board developed a four-year strategic plan to guide the expenditures of the Edward Byrne Memorial Justice Assistance Grant Formula Program grant funds for 2012 through 2016. This is the fourth year of the four-year plan.

1B. State Strategy Funding Priorities for FY 2015 JAG Funds

From a careful review of the data and analysis, the following goals were established:

1. Reduce the importation, manufacturing, distribution, and possession of illegal drugs and controlled substances throughout the state;
2. Reduce the trafficking of illegal drugs and controlled substances in and throughout the state;
3. Reduce the violence related to gangs through prevention, enforcement, and prosecution;
4. Assist local law enforcement through the procurement of equipment;
5. Encourage innovative law enforcement projects that address drugs and violent crime control that improves the functioning of the criminal justice system;
6. Encourage innovative prosecution projects that address drugs and violent crime control that improves the functioning of the criminal justice system;
7. Encourage innovative prevention projects that address drugs and violent crime control that improves the functioning of the criminal justice system;
8. Improve the integration of criminal history records between criminal justice agencies; and,
9. Reduce prison recidivism by providing effective drug and alcohol treatment for incarcerated juvenile and/or adult offenders.

Consistent with the above goals, it is anticipated that the following broad categories of programs may be funded: 1) Multijurisdictional Drug and Violent Crime Task Forces; 2) Gang-Related Enforcement and Prosecution Projects; 3) Residential Substance Abuse Treatment for Incarcerated Offenders; and, 4) Equipment for Local Law Enforcement.

1C. Subgrantee Award Process and Time Line

The JAG Board utilizes two (2) award processes. The first award process is for the regular JAG funds which include the state's portion of the federal allocation. The second award process is for the pass through funds for the "less than \$10,000 jurisdictions" which is added to the state's award. This award process is referred to as the JAG Local Law Enforcement Grant.

For the regular JAG funding, a Notice of Availability of Funds is distributed in February to all current subgrantees and interested applicants. The DAC maintains a database of interested applicants who request information on the JAG grant throughout the year.

The application process is an online through OKGrants. OKGrants is a web-based, online grant application system. The application period is open for 30 days with applications generally due in March. The JAG Board meets in May to review and make award decisions. Awards are made for a 12-month period beginning July 1 and ending June 30. The JAG Program award process is a competitive process in Oklahoma. In order to be eligible for funding, the applicant must be an eligible applicant under the grant program, be in good standing with all previous and current grant awards, and meet the requirements of the application process.

For the JAG Local Law Enforcement (LLE) Grant, a Notice of Availability of Funds is distributed in July with applications due in August. Applications for JAG LLE funds are made via the OKGrants systems as well. The JAG Board meets in August to review and make award decisions. Awards are for a 6-month period with the award period beginning January 1 and ending June 30. The JAG LLE Grant Program award process is also competitive. In order to be eligible for funding, the applicant must be an eligible applicant under the grant program, be in good standing with all previous and current grant awards, and meet the requirements of the application process. The need for funding in comparison to all grant requests and funding history are also considered.

For both award processes, the state administering agency (SAA) staff reviews the applications and provides information to the Board on programmatic and fiscal compliance. The JAG Board reviews the submitted applications then meets to make the funding decisions based on staff reviews, the strategy, and the goals previously listed. Prior the Award Meetings, the Board provides an opportunity for applicants to answer any questions that the Board may have and provide additional information as needed.

The applicants are notified of the award or denial. Awarded applicants are required to complete an award packet via OKGrants Grants Management System and attend a financial and administrative grant training prior to funds being released.

1D. Funding Priorities for FY2015 JAG Funds

The following summary provides a more detailed description of the projects that may be funded through the general JAG Program and the JAG Local Law Enforcement Grant Program:

❖ Multijurisdictional Drug and Violent Crime Task Forces

Currently in Oklahoma, there are 13 multijurisdictional drug and violent crime task forces (DVCTFs) that are funded through a JAG award. The multi-faceted capabilities of the DVCTFs have created a unique localized drug enforcement response to the importation, manufacturing, distribution, and possession of controlled substances throughout the state. However, since 2009 the majority of the task forces focus on more than just drug enforcement. Due to the level of expertise of the investigators on these task forces, rural law enforcement often turn to the task forces for assistance in various type of crimes, such as the investigation of homicides, sexual assaults, robberies, property crimes, gangs, arsons, kidnappings, human trafficking, and child abuse cases.

❖ Gang-Related Enforcement and Prosecution Projects

Prosecution of gang-related crimes is complex by nature. Gang cases have many complex prosecutorial aspects, a detailed history both among and between gangs, and often rely heavily on circumstantial evidence. Understanding the unique challenges of prosecuting gang crimes in large locales such as Oklahoma and Tulsa Counties requires specialized Gang Prosecution Units.

❖ Residential Substance Abuse Treatment for Incarcerated Offenders

Providing drug and alcohol treatment services to incarcerated offenders continues to be a need. According to the Bureau of Justice Statistics, at least 95% of all State prisoners will be released from prison at some point and nearly 80% will be released to parole supervision. Untreated substance abuse offenders are more likely to relapse and return to criminal

behavior. This often results in re-arrest and re-incarceration, jeopardizing public safety, and taxing the criminal justice system. Using evidence-based treatment while the offender is incarcerated is the best option. Funds are used to provide drug and alcohol treatment for incarcerated offenders at the Elk City Community Work Center, a facility of the Oklahoma Department of Corrections.

❖ **Equipment for Local Law Enforcement**

As required by the federal guidelines, the State of Oklahoma passes a percentage of the JAG funding to local law enforcement in the “less than \$10,000 jurisdictions.” It is critical that local and tribal law enforcement agencies have the resources needed to successfully perform their duties. The majority of jurisdictions continue to contend with shrinking budgets and limited financial resources. These hindrances negatively impact their ability to fulfill their responsibilities.

The JAG Board has historically utilized the funding set aside to procure equipment for eligible local and tribal law enforcement. The priorities for 2015 are: in-car or body worn law enforcement video systems; in-car mobile data systems; radios-in car or hand held/portable; vehicles (up to \$10,000); and, ballistic-resistant officer protection equipment (limited to daily wear ballistic vests and high-entry vest, helmets, and shields).

2. State Strategic Planning Process, Community-Engagement, Data and Analysis, Gaps in Resources, and Coordination

2A. State Strategic Planning Process and Community Engagement

Historically, the JAG Board has obtained input for the state strategy through a public forum where in-person presentations were provided to the Board by criminal justice professionals and other agency representatives. While the interaction between the interested professionals and the JAG Board has been important and beneficial, it was limiting because of the time constraints as well as the cost of travel, which presented hardships for some who wanted to attend the public hearing. An on-line survey format was used and allowed a broader range of professionals to provide input without time and travel costs. In 2012, the JAG Board approved the 2012-2016 Justice Assistance Grant State Strategy.

The process for the development of the strategy began in September 2011, when the JAG Strategy Plan Survey was implemented via Survey Monkey. The first notice of the survey was disseminated on October 10, 2011. A second reminder requesting completion of the survey was sent on October 20 with notice of a November 4 closing date. A total of 239 responses were received on the general JAG Strategy survey with the majority, or 48%, of the respondents from a rural area. Nineteen percent identified themselves as living in an urban area and 33% indicated that their community was both urban and rural. The category with the highest response rate to the survey was state or local law enforcement at 110 respondents. That was closely followed by 92 state or local prosecution offices. The remaining respondents were individuals from corrections, mental health, courts or the judiciary, private non-profits, federal agencies, tribal governments, and victim service agencies. Of the respondents, 88.7%, or 196, were not a representative or a designee on the JAG Board. Twenty-five of the 30 members or designees on the JAG Board responded to the survey.

A second survey, the JAG Local Law Enforcement Survey, was specifically targeted to local law enforcement. The purpose of the survey was to obtain information regarding the types of equipment needed by local law enforcement. The JAG Local Law Enforcement survey was also implemented via Survey Monkey. The first notice of the survey was disseminated on November 30, 2011.

For the JAG Local Law Enforcement Survey, a total of 103 responses were received with the majority, or 52%, of the respondents from a rural area. Fourteen percent identified themselves as living in an urban area and 34% indicated that their community was both urban and rural. Fifty-eight percent indicated their agency was a police department, 27% were from sheriff departments, 1% was tribal law enforcement, and 14% marked the “other” category. This other category included security, fire marshals, Department of Corrections, Highway Patrol, and campus police. The majority, 57, of the respondents indicated that they were the chief or sheriff; while the remaining respondents were deputies, reserve deputies, officers, or reserve officers. Over half, or 55%, had received a JAG Local Law Enforcement Equipment grant within the past five (5) years.

In addition to the surveys, the DAC Federal Grants Division staff compiled current and pertinent data for the JAG Board to review in conjunction with the information from the survey. Data was collected from a variety of sources on drug usage in Oklahoma, the availability and cost of the primary drugs of choice in the state, and the sources of supply. Information was also gathered on treatment admissions and deaths resulting from drug use. Data on trends in juvenile crime, arrests, trends in prison population, and gang-related crimes was compiled. By obtaining this information, the priority areas for funding through the JAG Program were identified.

2B. Data and Analysis

In addition to the two (2) surveys which were implemented to engage various disciplines in communities throughout the state, the District Attorneys Council staff also compiled state and national data for each of the purpose areas of the grant. The 2012-2016 Oklahoma State Strategy for the Edward Byrne Justice Assistance Grant is a 90-page document, of which 75 pages is devoted to the data compilation.

The first section of the plan provides a detailed review of the two (2) surveys. The information in the next section briefly summarizes the JAG Strategy Plan Survey Results and the JAG Local Law Enforcement Survey Results.

❖ JAG Strategy Plan Survey Results

The survey contained two (2) segments. The first section of the survey was designed to obtain feedback on five (5) broad “project areas” in each of the seven (7) allowed purpose areas under the JAG Program. Respondents were asked to rank these project areas on a rating scale from first (1st) to fifth (5th) in order of importance. An example of a project area would be Drug Enforcement Projects under Purpose Area 1: Law Enforcement Program. This type of question was repeated for each of the remaining six (6) purpose areas. For example:

Question 4: Other than general funding for your agency, please rank in order of importance the areas of need for Purpose Area 1 – Law Enforcement Programs:

- Drug Enforcement Projects

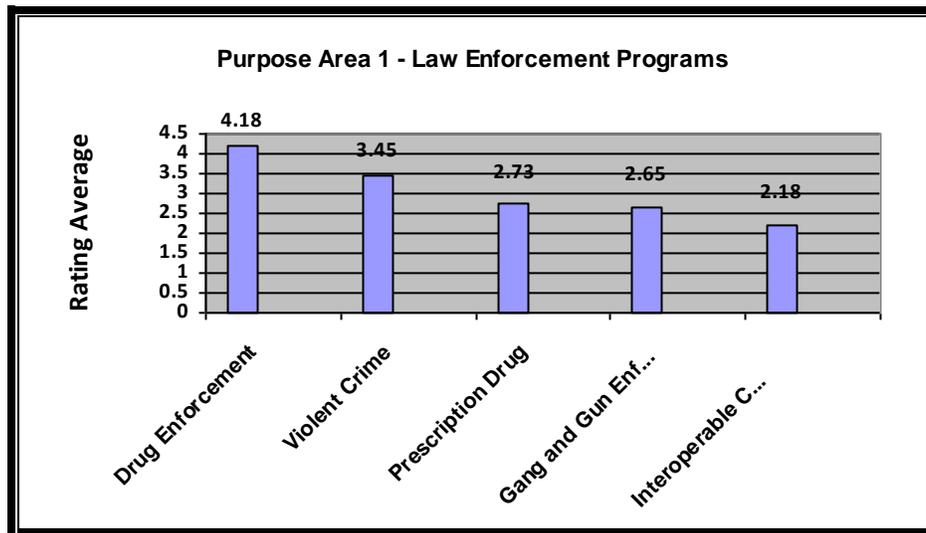

- Gang and Gun Enforcement Projects
- Interoperable Communication Projects
- Prescription Drug Projects
- Violent Crime Projects

The second segment of the survey focused on obtaining input on each of the previously established goals that were identified in the 2008-2011 State Strategy. Respondents were asked to rank each goal on a rating scale from Extremely Important to Extremely Unimportant. For instance:

Question 11: In a previous strategic plan, funding to reduce the importation, manufacture, distribution, and possession of illegal drugs and controlled substances throughout the state has been one of the goals identified by the JAG Board. When considering the needs in your community or service area, how important is this goal?

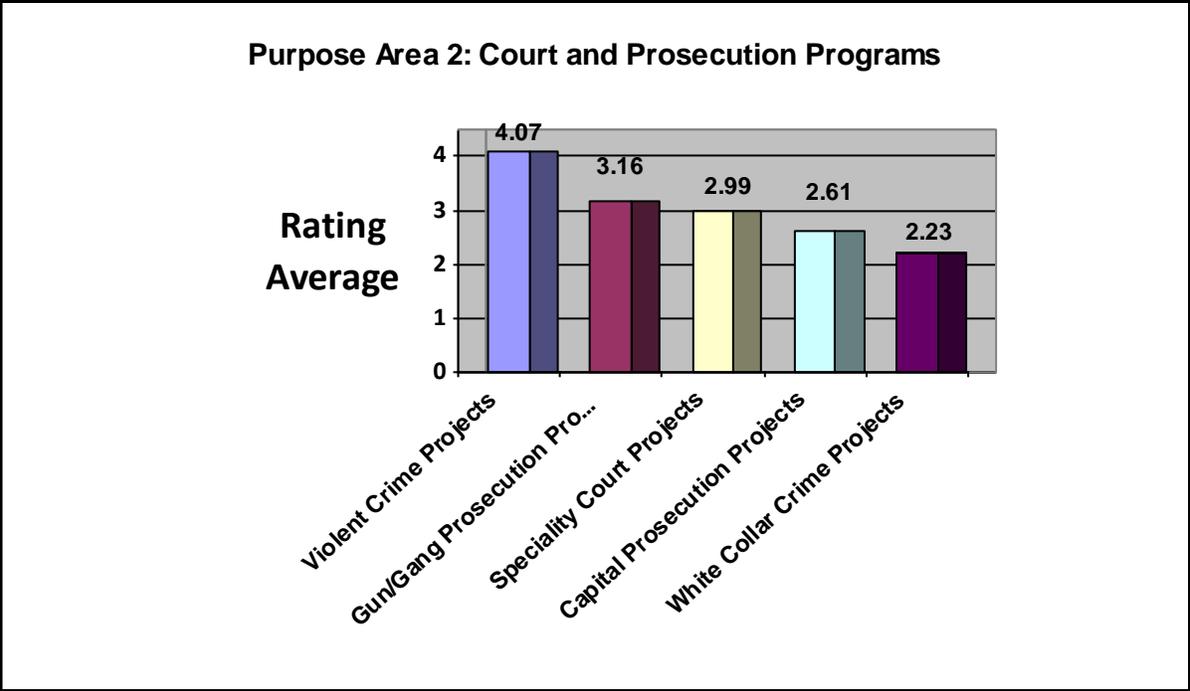

Purpose Area 1: Law Enforcement Programs

Of the 232 respondents, the top-ranked area of importance was Drug Enforcement Programs, which received nearly 52% of the responses. This was followed by Violent Crime Projects, Prescription Drug Projects, Gang and Gun Enforcement Projects, and Interoperable Communications Projects, respectively. The following chart identifies the average ranking of each of the project areas in this category on a scale of one (1) to five (5), with five (5) as the highest.

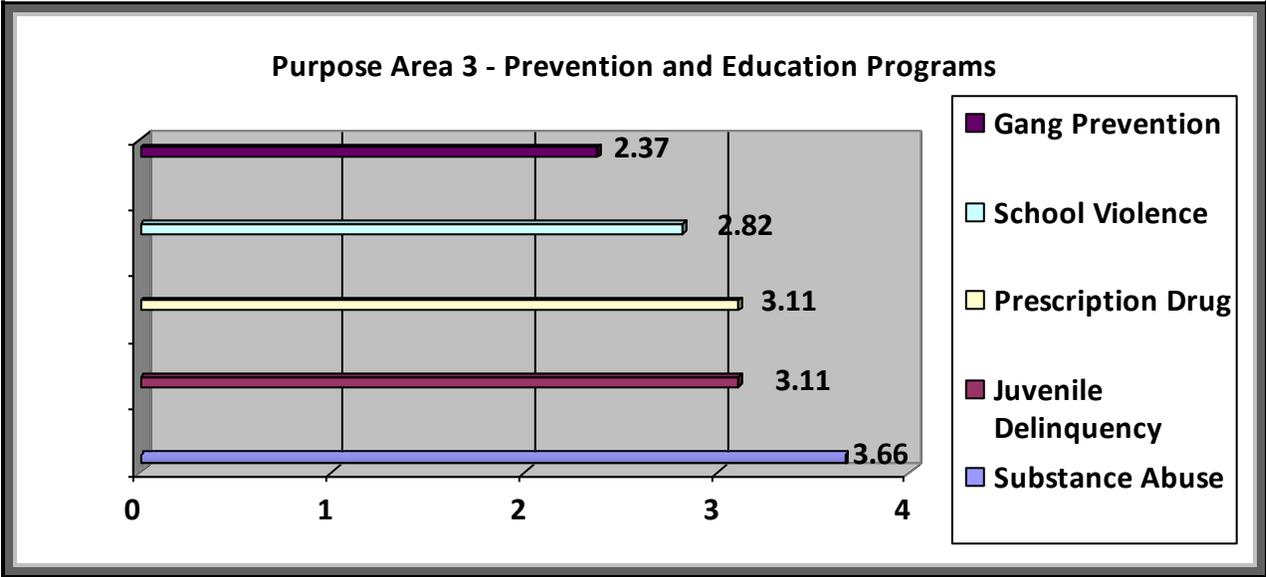

Purpose Area 2: Court/Prosecution Programs

In this category, the respondents ranked Violent Crime Prosecution Projects as the highest followed by Gun/Gang Prosecution Projects, Specialty Court Projects, Capital Prosecution Projects, and White Collar Crime Projects.

Purpose Area 3: Prevention and Education Programs

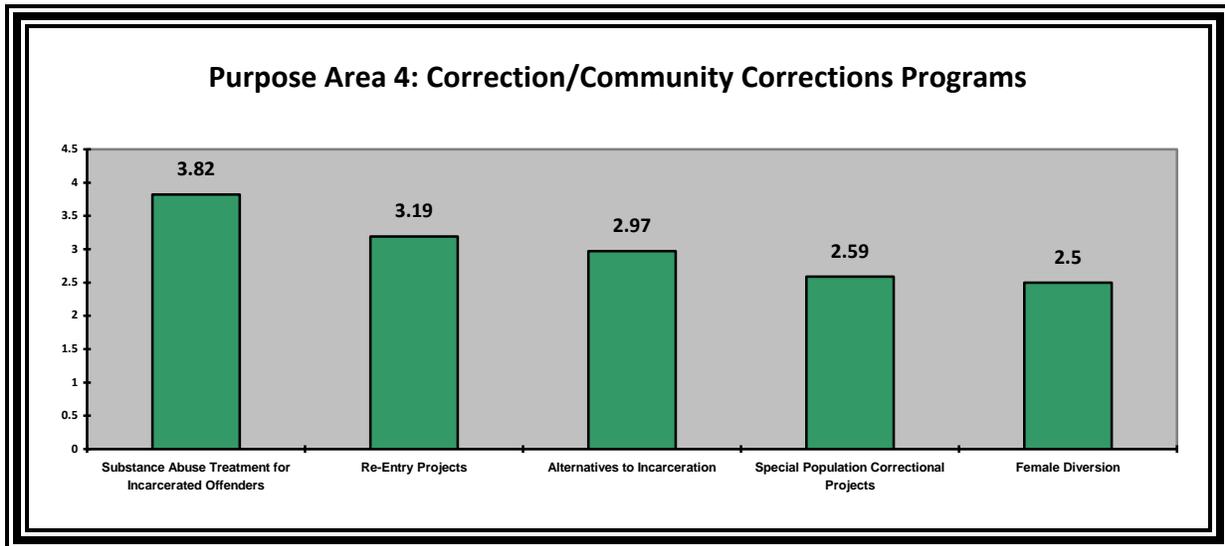

In Purpose Area 3, 224 respondents provided input and ranked Substance Abuse Prevention Projects as the highest. This project area was followed by Juvenile Delinquency Prevention Projects and Prescription Drug Prevention Projects; School Violence Projects; and, finally, Gang Prevention Projects.

Purpose Area 4: Corrections/Community Corrections Programs

In this category, 223 respondents provided input. By a substantial margin, Substance Abuse Treatment for Incarcerated Offenders was ranked first as a project area for funding. The following areas ranked second through fifth: 2) Reentry Projects; 3) Alternatives to

Incarceration; 4) Special Population Correctional Projects, such as Geriatrics, Incarcerated Parents, Veterans, or those with mental health needs; and, 5) Female Offender Diversion Projects.

Purpose Area 5: Drug Treatment Programs

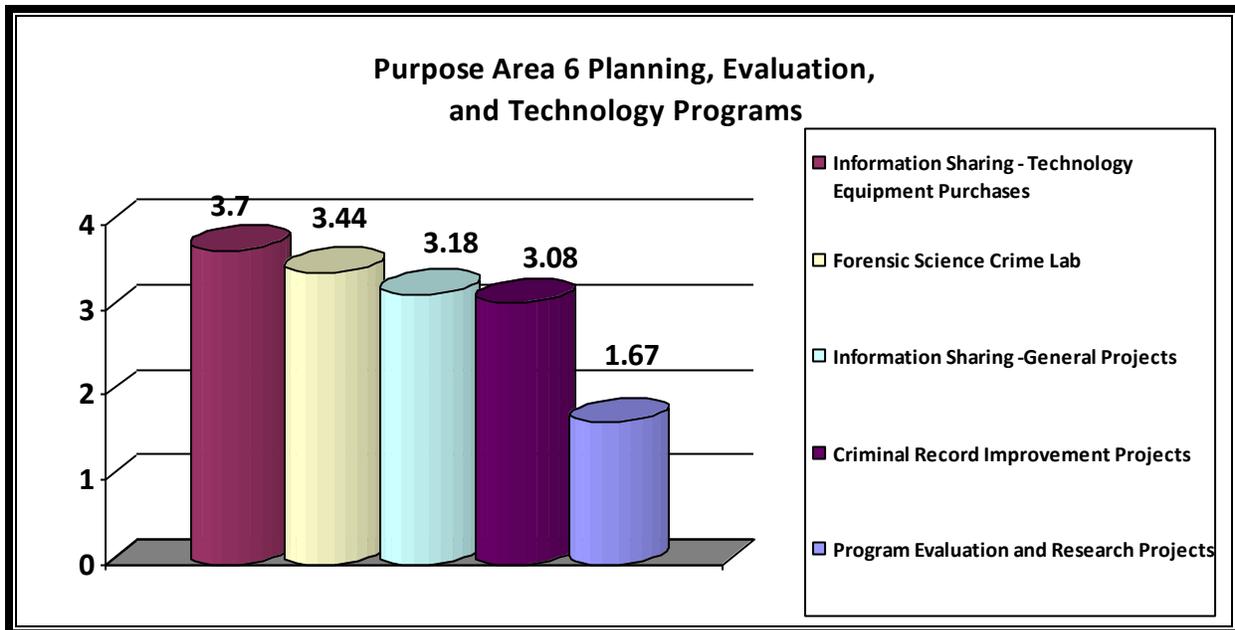

In this category, 220 respondents provided input. By a significant margin, the area of need with the highest ranking was Treatment Programs which Target Teens and their Families, closely followed by Community-Cased Treatment programs. Residential In-Patient Treatment was ranked third, followed by Corrections-Based Treatment Projects and Outpatient Treatment Projects.

Purpose Area 5 Drug Treatment Programs		
Project Areas	Ranking	Rating Average
Family Treatment Projects (Targets Teens and Their Families)	1	3.32
Community-Based Treatment Programs	2	3.28
Residential In-Patient Treatment Projects	3	3.14
Corrections-based Treatment Projects	4	2.87
Outpatient Treatment Projects	5	2.42

Purpose Area 6: Planning, Evaluation, and Technology Programs

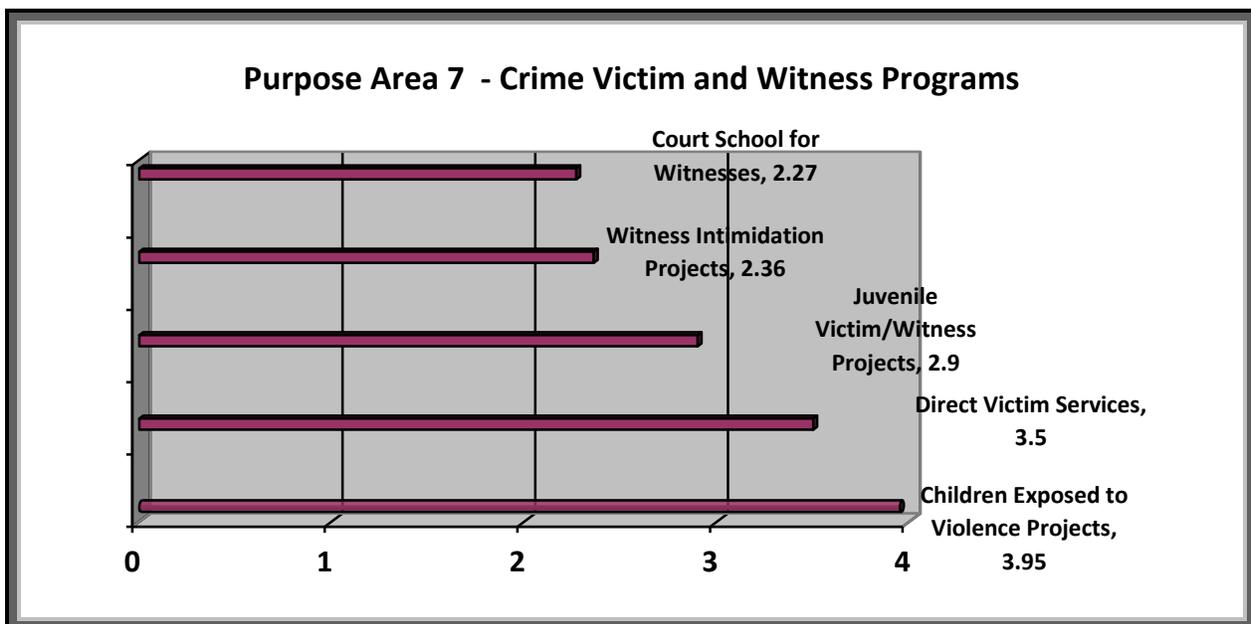

In this category, 218 respondents provided input and 21 respondents skipped the question. The areas of importance in this Purpose Area ranked as follows:

1. Information Sharing Projects, such as Technology Equipment Purchases
2. Forensic Science Crime Lab Projects
3. Information Sharing – General Projects
4. Criminal Records Improvement Projects
5. Program Evaluation and Research Projects

Purpose Area 7: Crime Victim and Witness Programs (other than victim compensation)

In this category, 217 respondents provided input and 22 respondents skipped the question. The highest response in this category was Children Exposed to Violence Projects, followed by Direct Victim Service Projects, such as Advocacy and Accompaniment of victims. The project area which was identified as third was Juvenile Victim/Witness Projects, fourth was Witness Intimidation Projects, and fifth was Court School for Witness Projects.

Feedback on Existing Goals for the JAG Program

The final section of the survey was developed to determine support, or lack thereof, for the existing goals. Each goal was identified and respondents were asked to determine the importance of this goal in relation to the needs in their community or service area.

Question	Goal	Extremely Important or Important	Unimportant or Extremely Unimportant	Comments
11	Reduce the importation, manufacturing, distribution, and possession of illegal drugs and controlled substances throughout the state.	97.7%	2.3%	<i>“This should be the primary focus of the JAG.” “All crime relates back to drugs whether direct or indirect.”</i>
12	Reduce the trafficking of illegal drugs and controlled substances in and through the state.	96.8%	3.2%	<i>“Most effective use of the funds since including violent crimes.”</i>
13	Reduce the violence related to gangs through prevention, enforcement, and prosecution.	81.8%	18.2%	<i>“Gangs are becoming more powerful and consolidating their efforts in small towns.”</i>
4	Assist local law enforcement through the procurement of equipment.	94.9%	5.1%	<i>“Small departments are in extreme need of the equipment.”</i>
15	Encourage innovative law enforcement projects that address drugs and violent crime control that improves the functioning of the criminal justice system.	94.4%	5.6%	<i>“Proven likelihood of success should be required.”</i>
16	Encourage innovative prosecution projects that address drugs and violent crime control that improves the functioning of the criminal justice system.	91.2%	8.8%	<i>“Proven programs with defined goals and requirements only.”</i>
17	Encourage innovative prevention projects that address drugs and violent crime control that improves the functioning of the criminal justice system.	92.6%	7.4%	<i>“Prevention should be a priority.”</i>
18	Improve the integration of criminal history records between criminal justice agencies.	94%	6%	<i>“Too many fusion centers already. There is a need but this should be a very minimal resource</i>

				<i>investment.”</i>
19	Reduce prison recidivism by providing effective drug and alcohol treatment for incarcerated juvenile and/or adult offenders.	85.1%	14.9%	<i>“Funding should be based on previous success and proven results, not just investing money.”</i>

❖ JAG Local Law Enforcement Survey Results

The survey contained two (2) segments that targeted equipment and the needs of local law enforcement. The first section of the survey was designed to obtain feedback on the type of equipment that is needed in the field. Respondents were asked to rank categories of equipment in order of importance from one (1) being most important to eight (8) being least important. The second segment of the survey focused on obtaining information on the FCC-mandated deadline for radio narrow banding and information on reserve officers and deputies.

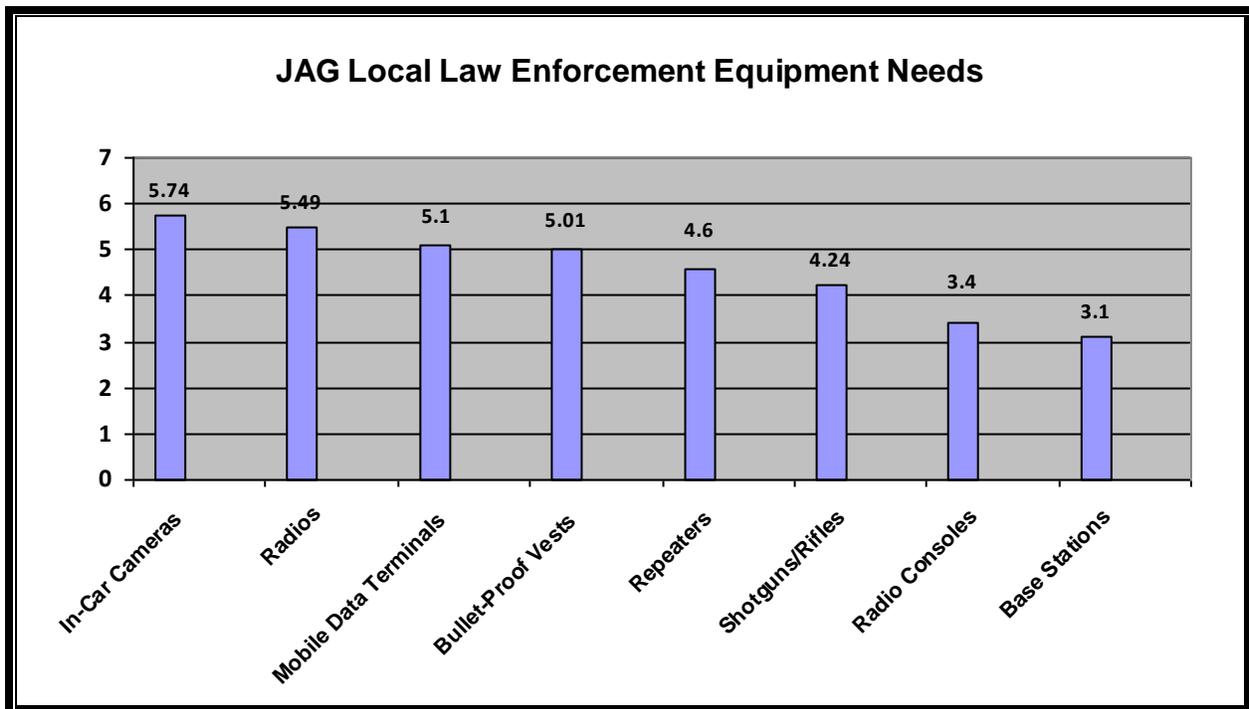

The survey was widely distributed to current JAG Local Law Enforcement (LLE) grant recipients, and the survey was forwarded by the Oklahoma Sheriff’s Association, the Oklahoma Regional Community Policing Institute, and the Oklahoma Association of Chiefs of Police.

Because of this wide dissemination, determining the exact response rate of the survey is difficult. The response rate, also known as completion rate or return rate, is computed based on the number of people who answered the survey divided by the number of people who received the survey invitation or announcement.

Equipment Needs

Respondents were asked to rank the type of equipment that is most needed in their community. The equipment ranked most needed was in-car cameras, followed by radios. The equipment that ranked third was mobile data terminals.

Comments:

Respondents had the option of adding additional equipment that was not listed. The following equipment was identified. The number in parenthesis indicates the number of times it was listed.

- Vehicles (2)
- Portable Breath Testers (1)
- Smart Phones for all on-duty personnel (1)
- Emergency lighting (1)
- Radars (1)
- Livescans (1)
- Electronic Control Devices (1)

❖ **Compilation of Data Review**

The Data Review Section of the 2012-2016 Oklahoma State Strategy for the Edward Byrne Justice Assistance Grant utilized data from various sources for each of the seven (7) allowable purpose areas under the JAG Program. More than 60 resources were used and are cited in the appendix of the document. The following is a *sample* of the numerous resources which were used in the data review section:

- Center for Disease Control and Prevention, *Youth Risk Behavior Surveillance 2009*, www.cdc.gov/datastatistics.
- Office of the Chief Medical Examiner Annual Report: 2008, January 1 – December 31, State of Oklahoma.
- Council of State Governments, Justice Center, *Justice Reinvestment in Oklahoma: Initial Work Group Meeting*, June 23, 2011
- Federal Bureau of Investigation, *Crimes Rates Fall Again*, May 23, 2011.

www.fbi.gov/news/stories/2011/may/crimes_052311/crime_052311.

- Jurist Legal News and Research, *DOJ Reports Drop in Violent Crime for 2010*, www.jurist.org/paperchase/2011/09/doj-reports-drop-in-violent-crime-for-2010.php.
- National Criminal Justice Association, *Cornerstone for Justice: Byrne JAG and its Impact on the Criminal Justice System*, 2010.
- Office of National Drug Control Policy, News and Public Affairs, *Early Marijuana Use a Warning Sign for Later Gang Involvement: New Report Shows Teens Who Use Drugs Are More Likely to Engage in Violent and Delinquent Behavior*, June 19, 2007. <http://www.whitehousedrugpolicy.gov/news/press07/061907.html>
- Office of National Drug Control Policy, Drug Policy Information Clearinghouse, *State of Oklahoma: Profile of Drug Indicators*, May 2007.
- Oklahoma Administrative Office of the Courts, *The Supreme Court of Oklahoma, Annual Report 2010*, July 1, 2009-June 30, 2010.
- Oklahoma Bureau of Narcotics and Dangerous Drugs Control, *Cocaine Fact Sheet*, 2007. http://www.ok.gov.obnnd/Drug_Fact_Sheets/Cocaine_Fact_Sheet.html

The data was used to develop a section for each of the seven (7) allowable purpose areas under the JAG Program. The following is an *excerpt* from the 2012-2016 Oklahoma State Strategy for the Edward Byrne Justice Assistance Grant for the Purpose Area One: Law Enforcement and Purpose Area Two: Prosecution and Court Programs. The full strategic plan contains such data analysis for all purpose areas.

Purpose Area One: Law Enforcement Programs Overview

Overview

The primary purpose of the Justice Assistance Grant (JAG) is to prevent and control crime. At the very core of this goal are initiatives which provide, expand, or enhance the abilities of law enforcement.

According to the Council on Law Enforcement Education and Training (CLEET), Oklahoma has 749 local police and sheriff's departments, including tribal law enforcement agencies. There are also several state agencies that have law enforcement functions. Throughout the state, there are 9,929 full-time and 3,606 reserve police officers and sheriff's deputies for a total of 13,535 officers, responsible for covering more than 69,000 square miles in Oklahoma. In order to protect the public it is critical that local, state, and tribal law enforcement agencies have the resources needed to successfully perform their duties.

The majority, if not all, of local jurisdictions in Oklahoma continue to contend with shrinking budgets and limited financial resources, hindrances which negatively impact their ability to fulfill their responsibilities. The considerable reduction in federal funding through the Department of Justice and the Department of Homeland Security in the past several years has made the situation increasingly more difficult.

In a time when technology is progressing rapidly and where state and federal law enforcement agencies are generally able to take advantage of the latest technological advancements, local law enforcement is struggling to maintain the basics. It is not uncommon for rural law enforcement agencies to deal with significantly aging fleets and equipment that has not been replenished and is past its prime usage.

In addition to supporting the need for equipment for law enforcement, the JAG Board has also focused on initiatives which address drugs and violent crime. The following data and information is provided to assist the JAG Board in setting goals and objectives for this purpose area.

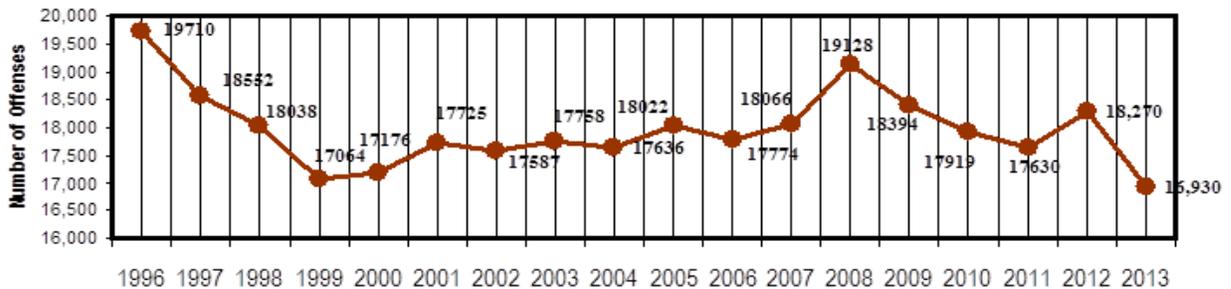

VIOLENT CRIME

Over the last several years, the national rate of violent crime rate has dropped. While Oklahoma has also realized a drop in violent crime, it is less robust than the national average. In 2013, Oklahoma experienced a 7.3 % decrease in violent crime.

The Oklahoma State Bureau of Investigation (OSBI) is responsible for the collection of Uniform Crime Report (UCR) data. OSBI’s UCR Report provides information on the Violent Crime Index as well as statistics on non-violent crimes. Law enforcement agencies throughout the state provide data to OSBI to aggregate. The results serve as indicators of the state crime trends. The following information is obtained from the four (4) offenses which comprise the Violent Crime Index. These offenses include: 1) Murder; 2) Rape; 3) Robbery; and, 4) Aggravated Assault.

According to UCR data between 1996 and 1999, there was a steady decline in the number of violent crimes reported in Oklahoma. From 2000 through 2007, the number of violent crime remained relatively stable. However, in 2008, the violent crime increased to levels not seen since 1996. From 2009-2011, there was drop in violent crime follow by a small increase in 2012. In 2013, the state saw a decrease from 18,270 to 16,930, a decrease of 7.3%.

VIOLENT CRIME STATISTICS IN OKLAHOMA Uniform Crime Report 1996-2013

Homicide

In 2013, Oklahoma logged 11 fewer homicides than in 2012, for a total of 208 homicides. Comanche County had the highest per capita rate of homicides at 10.21 per 100,000 people. Tulsa County followed closely at 9.48 and Oklahoma County ended the year at 7.85 homicides per 100,000 people. The remaining counties were near or below the overall state per capita rate of 5.38 homicides per 100,000 people.

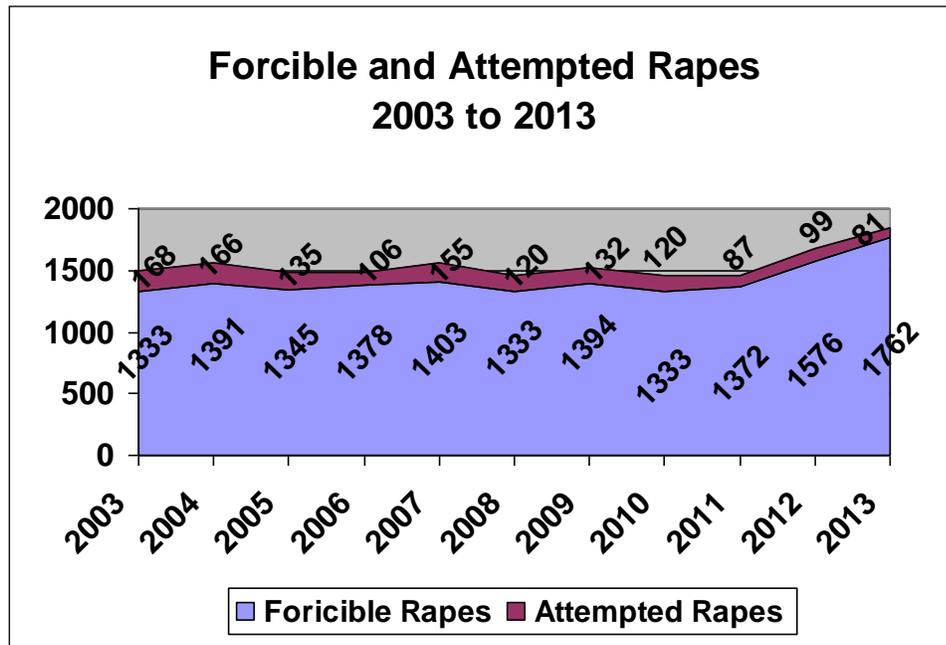

According to the OSBI, the 20 to 24-year old age group accounted for the highest percentage of murder victims with 39 victims. This was followed by the 30 to 34 year-olds, and 35 to 39-year-olds, both groups at 28 victims. Male victims outnumber female victims approximately two and a half (2.5) to one (1). Homicides accounted for 1.2% of all violent crimes.

Firearms were employed in 67% of all reported murders. The use of a knife or other cutting device was involved in 12.6% of the murders. The murder of one family member by another accounted for 17.9% of all murders. Of the 208 offenses, 32 homicides resulted from a spouse, ex-spouse, girlfriend or boyfriend, killing their intimate partner.

Rape

Rape is defined as “the carnal knowledge of a female forcibly and against her will, regardless of age.” However, statutory rape statistics are not included in this category. Forcible rape differs from other violent crime in that the victim, in many cases, is hesitant to report the offense to the police. It should be noted that because rape is so significantly underreported, this data is under representative of the true picture of this crime.

HOMICIDES IN OKLAHOMA 1996 - 2013	
YEAR	TOTAL
1996	223
1997	229
1998	204
1999	231
2000	181
2001	185
2002	163
2003	206
2004	187
2005	187
2006	207
2007	222
2008	212
2009	229
2010	191
2011	219
2012	219
2013	208

The UCR data divides rape into (1) rape by force and (2) attempts to rape. In 2013, there were 1,762 reported forcible rapes and attempted rapes. This crime accounted for approximately 10.4% of all violent crimes that were reported. A total of 555 rapes were cleared by arrest or exceptional means, resulting in a clearance rate of 31.5%.

Robbery

Robbery is defined as “the felonious and forcible taking of property from the care, custody, or control of a person or persons by violence or putting the person in fear and against his or her will.” In order for the crime of robbery to take place, the victim must be present. Robberies are reported in the following categories: gun, knife or cutting instrument, other dangerous weapon, and strong-arm robbery.

A total of 3,052 robberies were reported by law enforcement agencies in 2013. Robberies accounted for 18% of all reported violent crimes and 2.1% of all index crimes. There were 806 robberies cleared, resulting in a clearance rate of 26.4%.

The highest percentage of persons arrested for robbery (14.9%) was in the 25 to 29-year olds. The largest number of offenses, 873 or 28.6%, occurred on the residence (anywhere on the premises), followed by robberies on the highway. Armed robbery with any type of weapon occurred in 59.9% of the offenses.

Aggravated Assault

Aggravated assault is defined as “an unlawful attack or an attempt to attack through force or violence to do physical injury to another”. An aggravated assault may be committed with a gun, knife, or other cutting instrument, other dangerous weapon, or through the aggravated use of hands, fists, or feet. All assaults where no weapon is used and which results in minor injuries are classified as non-aggravated and are not counted in the index crime totals.

A total of 11,909 aggravated assaults were reported by law enforcement agencies in 2013. Aggravated assaults account for 70.3% of all violent crimes and 8.3% of the index crimes. A total of 5,845 aggravated assaults were cleared by arrest or exceptional means, representing a clearance rate of 49.1%. Again, the 25 year-old to 29 year-old age group accounted for 16.6% of the persons arrested for aggravated assault.

DRUG MARKET ANALYSIS AND DRUG-RELATED CRIME IN OKLAHOMA

According to the 2014 National Drug Threat Assessment Summary, the number of methamphetamine laboratories seized in Mexico has increased significantly since 2008, and methamphetamine seizures at the southwest Border increased more than three-fold over the last five (5) years. Mexico-produced methamphetamine has extremely high purity and potency levels. In 2012, purity levels averaged close to 90 percent, while prices remained low and stable.

Marijuana is still the most widely available and commonly abused illicit drug in the United States. The 2014 National Drug Threat Assessment Summary states that 80 percent of responding agencies reported the availability of marijuana was high in their jurisdiction. This problem is compounded with the large-scale importation from Mexico along with the legalized marijuana and “medical marijuana” initiatives.

According to the 2011 North Texas High Intensity Drug Trafficking Area (HIDTA) report to Congress, the Dallas/Fort Worth metropolitan area is an area recognized as a national distribution center for illicit drugs, due to its proximity to the United States/Mexican border and the multiple transportation routes available. Law enforcement investigations show that Mexican DTOs are the primary supplier of wholesale quantities of methamphetamines, powder cocaine,

commercial grade marijuana, and black tar heroin. These DTOs use “cell heads” in Dallas and Oklahoma City to manage the wholesale narcotic distribution within these markets.

It is not surprising that 89 percent of all illicit drug arrests by the task forces in Oklahoma from July 1, 2013 to June 30, 2014 involved with either methamphetamine or marijuana.

The North Texas HIDTA encompasses 15 northern Texas Counties and six (6) Oklahoma counties. The National Seizure System data for 2009 indicates that illicit drugs originating from within the North Texas HIDTA were destined for states such as Alabama, Arkansas, Florida, Georgia, Illinois, Indiana, Kentucky, Louisiana, Michigan, Mississippi, Missouri, New Jersey, New York, North Carolina, South Carolina, and Tennessee.

As a major supplier of wholesale quantities of illicit drugs, some of the DTOs work with members of African American and Hispanic Street gangs to distribute methamphetamine, marijuana, and cocaine at the retail level. Several of the task forces are reporting that a large DTO is operating from behind prison walls. These same task forces are in the process of combining investigations and joining forces with the DEA and other investigative agencies to address this issue.

Drug Arrests in Oklahoma

Historically, one of the primary focuses of the JAG funding has been drug task forces. In 2009, the vast majority of the task forces expanded their scope to become Drug and Violent Crime Task Forces (DVCTFs) in order to be reflective of the actual work that was being accomplished with the JAG Funds. A drug and violent crime task force is defined as a multijurisdictional task force that includes (a) full-time officers; (b) from a variety of different law enforcement agencies; (c) within a specific geographic region; (d) that conduct drug and violent crime investigations and drug enforcement activities; and, (e) that conduct investigations across a geographic region that spans individual departmental jurisdiction.

In addition to investigating drug enforcement cases, the DVCTFs have also investigated the following types of cases: 1) Homicides; 2) Shooting with Intent to Kill; 3) Sexual Assault; 4) Child Physical and Sexual Abuse; 5) Explosives; 6) Robberies; 7) Property Crimes; 8) Arson; 9) Kidnapping; and, 10) Human Trafficking.

In Oklahoma, like the rest of the nation, law enforcement budgets are increasingly strained, especially in rural areas. Law enforcement officers in small towns, cities, and counties are staffed at bare minimum. DVCTFs assist local law enforcement by lending expertise in the drug enforcement and violent crime areas.

In the 2012-2013 grant year, 19 multijurisdictional DVCTFs were funded. Due to a federal reduction in funds in the 2013-2014 grant year, the number of task forces was reduced to 13. In an effort to maximize the available 2013-2014 funds, only personnel and benefits were funded and only the positions of investigators, prosecutors, and/or project directors were funded. In the 2014-2015 grant year, with virtually the same amount of available funds, the same logic was applied. Only personnel and benefits were funded, and again, only investigators, prosecutors, and/or project directors were funded in order to keep the 13 task forces funded.

While the current JAG projects are still implementing their grant programs, a look at the accomplishments of the task forces last year indicates that the task forces reported a total of 1,782 arrests during the grant period. Of these arrests, 935, or 61 %, were arrested for methamphetamine, or methamphetamine-related violations, compared to 28 % arrested for marijuana violations. Arrests for amphetamine and/or methamphetamine have ranked the highest in the number of arrests, followed by marijuana since at least 2006. In 2013, these two (2) drugs accounted for 89% of the total number of drug arrests.

**Persons Arrested By Task Forces for Illegal Substance and Violation
July 1, 2013 through June 30, 2014**

Drug	Possession	Possession with intent	Trafficking	Distribution	Manufacture	Conspiracy	Cultivation	Diversion	Attempt to Manufacture	Total	Percentage of Arrests by Substance
Amphetamine Methamphetamine	275	164	99	207	75	73	0	26	42	935	61%
Marijuana	152	158	7	66	0	1	38	0	0	422	28%
Cocaine-all except Crack	1	0	3	1	0	0	0	0	0	5	1%
Pharmaceuticals	58	20	0	24	0	5	0	3	0	110	7%
Crack Cocaine	7	1	3	12	0	1	0	0	0	24	2%
Heroin	6	6	0	0	0	0	0	0	0	12	1%
Designer Drugs Such as Ecstasy	7	1	0	0	0	0	0	0	0	8	0%
Hallucinogens	4	0	0	0	0	0	0	0	0	4	0%
PCP	3	0	0	0	0	0	0	0	0	3	0%
Total	513	350	112	310	75	80	38	3	42	1,523	
Percentage of Arrests by Violation	34%	23%	7%	20%	5%	5%	2%	1%	3%		

For all drug-related arrests from July 2013 to June 2014, 34% were for possession. DVCTFs do not typically focus on simple possession offenses, but sometimes these types of cases occur as a result of executing search warrants at dwellings which may be occupied by several individuals. In the course of investigations, individuals may be found in possession of small amounts of illegal drugs and an arrest for possession is required.

The DVCTFs seized a significant amount of illegal drugs in their investigations from July 2013 to June 2014. Heroin and PCP appear to be making resurgence. Diverted pharmaceuticals

continue to be a significant issue. Estimating street value for the seized drugs across the state can vary widely due to purity and availability. Based on a range of drug values supplied by Oklahoma State Bureau of Investigation and the task forces in their semi-annual progress reports, it is estimated that approximately \$10,755,010 illegal drugs and drug manufacturing equipment have been seized. \$10,755,010 is roughly twice the amount that was seized in the previous grant year, with fewer task forces and fewer investigators. The following chart identifies the drugs and equipment seized.

DRUG SEIZURES			
July 1, 2013 through June 30, 2014			
TYPE OF DRUGS SEIZED	AMOUNT OF DRUGS SEIZED	OSBI ESTIMATED STREET VALUE	LOCAL STREET VALUE
Methamphetamine	264 pounds	\$15,000 to \$18,000 per pound	\$4,356,000
Marijuana	4,627 pounds	\$800 to \$1,500 per pound	\$5,552,400
Cocaine	38 pounds	\$18,000 to \$22,000 per pound	\$760,000
Diverted Pharmaceuticals	6,181 Pills	\$3 to \$50 per pill	\$61,810
All Other Seized Drugs and Equipment, including Heroin, Crack, and PCP			\$24,810
TOTAL			\$10,755,010

A very important element of DVCTFs is the *integration of their services* within the local law enforcement system *within their community*. Many local law enforcement agencies rely heavily not only on the DVCTF's expertise but their manpower and equipment. Throughout the state, the task force investigators provided assistance in 4,659 incidents to local law enforcement in 2013-2014. Examples of assistance include helping an agency write or serve search or arrest warrants, manhunts, photographing crime scenes, sharing intelligence, lending surveillance equipment, conducting interviews or interrogations, completing field tests on suspected contraband, etc. The technical assistance and expertise provided by the task forces is invaluable to local law enforcement. In addition to the arrests and assistance to local law enforcement, the task force investigators also:

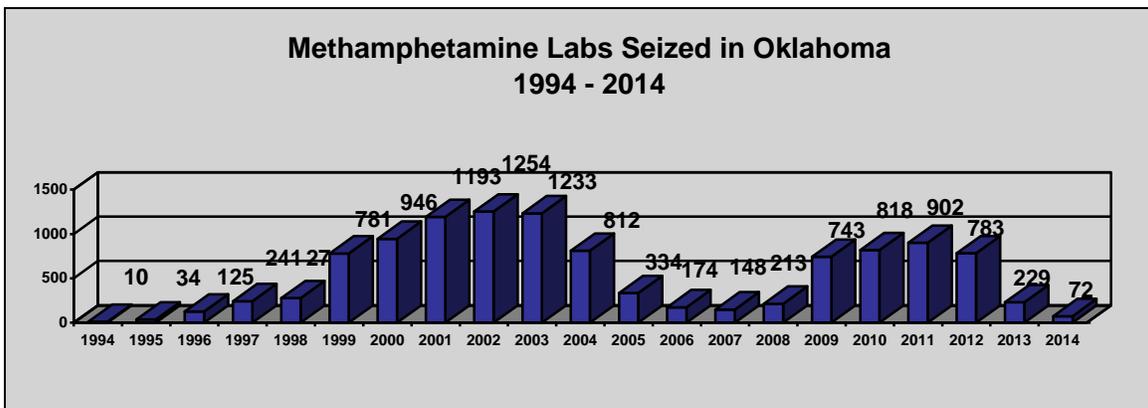

- Served 604 search warrants;
- Seized 401 Firearms;
- Responded to 72 lab seizures;
- Assisted in the clean-up of 18 drug-related dumpsites;

- Assisted 14 minors at the scenes;
- Provided 145 drug-awareness and drug prevention programs throughout the state;
- Provided training for 6,408 community members and or professionals; and,
- Provide training for 807 law enforcement professionals.

The North Texas HIDTA reports that the most significant drug threat to the North Texas region (which includes Oklahoma) is methamphetamine. Many think that the methamphetamine problem had been addressed with the passage of Oklahoma’s pseudoephedrine control bill in 2004. Certainly, a significant decline, nearly 90%, in the number of methamphetamine lab seizures was realized between 2005 and 2008.

However, in 2008, there was a steady increase in the number of methamphetamine lab seizures. The reason for the increase was a new methamphetamine recipe which uses smaller amounts of pseudoephedrine, thus allowing meth cooks to avoid Oklahoma’s pseudoephedrine purchase limits. Known as the “One Pot” or “Shake and Bake” lab, this new recipe was responsible for the increase in meth lab seizures: 213 labs in 2008, 743 labs in 2009, 818 in 2010, 902 in 2011 and 783 in 2012. However, in 2013 there was a decrease in methamphetamine labs seized with 229 and only 72 labs seized in the 2014 grant year.

The decrease in the number of methamphetamine labs is due, at least in part to the stricter policing of pseudoephedrine sales and a corresponding drop in the price of Mexican methamphetamine. This is causing a rise in the importation of Mexican Cartel methamphetamine, which will be more difficult and dangerous to detect and control.

Purpose Area Two: Prosecution and Court Programs

Overview

Traditionally, criminal court in the U.S. is an adversarial system in which those accused of crime take part in a truth-finding process involving a prosecutor, a defense attorney, and a judge. The prosecutor’s primary function is to seek justice and protect the public safety and welfare of the community. The prosecutor is an advocate for justice, the victim, and the community they serve. Their obligation is to protect the innocent, convict the guilty, guard the rights of the accused, and enforce the rights of the public. It sometimes takes a creative approach to meet all these goals and expectations. In recent years, especially with drug crimes, prosecutors have begun to test new techniques for not just prosecuting the cases presented, but to try to break the cycle of crime. This has ushered in a new era of cooperation with defense attorneys.

The U.S. Constitution guarantees that those accused of committing a crime have the right to the “assistance of counsel” and a defense attorney’s primary responsibility is make sure that offenders’ rights have not been violated and that they are afforded due process. However, they also see the need to break the cycle of crime and recognize that their clients need an advocate as much as they need a lawyer. Alternatives to incarceration for non-violent offenders that involve treatment programs for drug and mental health issues are a workable, cost-effective alternative to jail or prison.

Some cases which meet specific criteria are assigned to Specialty or “Problem-Solving” Courts within the criminal court system. These specialty courts focus on the needs of a particular group of offenders or victims. They are designed to address the root causes of crime by focusing on the underlying problems of litigants which may not be addressed in a traditional court setting. There are a number of specialty courts currently operating in Oklahoma, including adult and juvenile drug courts, mental health courts, veterans’ drug court, and family drug courts.

When the adversarial system is balanced and functioning smoothly, offenders receive the services they need to increase the likelihood they will not reoffend, and jails and prisons are not used for supervision of offenders who are more appropriately managed in the community. While the JAG Program is one of the very few federal grant programs which support the efforts of local law enforcement, it is also in place to recognize the necessity of collaboration and cooperation within all aspects of the criminal justice system in order to improve public safety. The JAG Program’s second purpose area focuses on prosecution and court programs that complement the enhanced efforts made by law enforcement.

PROSECUTION

In Oklahoma, the District Attorneys represent between one (1) and five (5) counties in their individual districts. In addition to the 27 elected District Attorneys, there are 294 prosecutors, 103 investigators, 27 victim-witness coordinators, and more than 535 support staff, which include numerous victim-witness assistants, within the District Attorneys system throughout the state.

The purpose of the District Attorneys system is to represent the state in the prosecution of criminal offenses. “While the underlying methods have remained virtually unchanged since our nation’s founding, criminal courts have evolved over time through new laws, court decisions, and a new approach to crime fighting, ultimately moving toward a system that is more equitable and efficient,” according to the National Criminal Justice Association.

In 2014, there were just over 94,000 cases filed by Oklahoma’s District Attorneys. All of the District Attorney Offices, except Oklahoma and Tulsa counties, utilize JustWare Case Management software. Oklahoma and Tulsa Counties utilize separate management systems.

According to statistics from JustWare, 68,278 cases were filed by prosecutors in the 75 participating counties in 2013. According to Tulsa County, they filed 6,592 felonies and 7,078 misdemeanors, a total of 13,670 cases, in 2014; and Oklahoma County filed 8,764 felonies and 4,120 misdemeanors, a total of 12,884 cases.

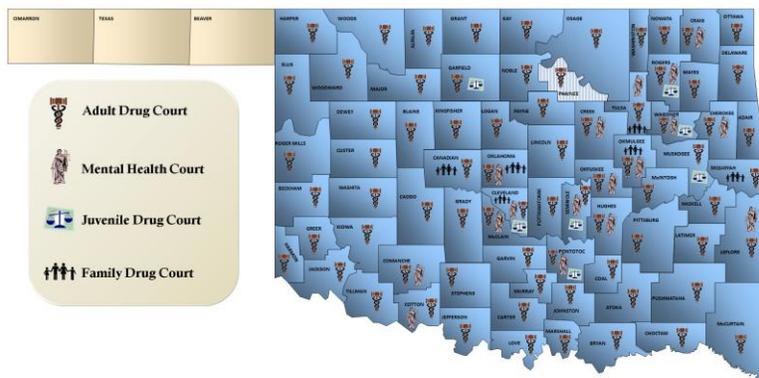

SPECIALTY COURTS

The first drug court, supported by Byrne JAG funding, was developed in 1989 in Dade County (Miami), Florida, as a way to stop the revolving door of drug addiction and crime. The approach has been replicated in more than 2,500 drug courts nationwide, and the model used as a springboard for other specialty courts. These include domestic violence, mental health, reentry, veterans, DWI, community, and gun courts. Some jurisdictions are also demonstrating the effectiveness with sexual offenses courts, elder courts, and gambling courts.

Oklahoma supports a number of specialty courts, or problem-solving courts, including adult and juvenile drug courts, mental health courts, veteran's drug court, and family drug courts. Specialty courts increase the likelihood of rehabilitation for the offender or protection of the victim; unclog the criminal docket; reduce prison overcrowding; and, ultimately, improve public safety. Although specialty courts vary among jurisdictions, they each include the overarching principles of judicial oversight; individualized assessments; enhanced communication and collaboration between and among court and allied professionals, social service providers and the community; specialized training for staff; increased accountability for the offender; appropriate sanctions and incentives; and, data analysis that measures outcomes.

According to the Department of Mental Health and Substance Abuse Services (ODMHSAS), there are currently 45 adult drug courts serving 73 counties, seven (7) juvenile drug courts, 13 mental health courts serving 16 counties, several drug courts with veteran's dockets, and six (6) family drug courts operating in the state. Several task force investigators are permanent members of their local drug court. These investigators aid in compliance checks and often refer offenders to drug court.

Drug Courts & Mental Health Courts FY2015

Oklahoma Department of Mental Health & Substance Abuse Services

As is indicated by the number, drug courts are generally well established in Oklahoma. While funds are always needed to support the drug courts, other state and federal funding is also available. However, mental health courts and veteran's drug courts are relatively new. The Oklahoma Department of Corrections 2013 Annual Report indicates that 14,625 offenders have

a mental health need - 75% of female offenders and 53% of male offenders. In addition, 57% of inmates diagnosed with a mental illness were incarcerated for non-violent offenses. The Oklahoma County Jail population includes as many as 500 persons with a mental illness at any one time and the Tulsa County Jail has at least 200.

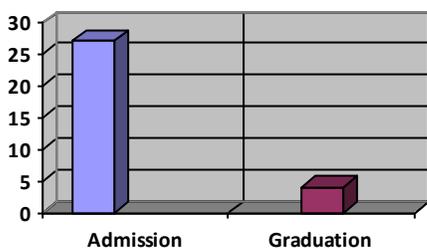

The Oklahoma Department of Corrections identifies that the average annual cost to house an inmate with mental health needs is \$23,000, while the average annual cost for mental health court is \$5,400. This amounts to a savings of \$17,600 per year per participant. Additionally, mental health court programs decrease unemployment, decrease jail days, and decrease inpatient hospitalization days, leading to further savings.

The goals of mental health courts are to break the cycle of worsening mental illness resulting in criminal behavior and to provide effective treatment options instead of using criminal sanctions for offenders with mental illnesses.

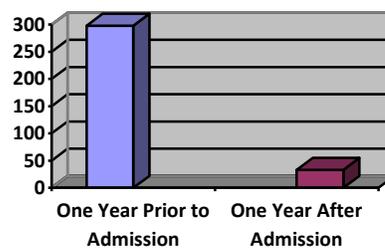

To be eligible to participate in this specialty court, offenders must have a mental illness, along with a current criminal offense (or are facing revocation), and no prior violent charges. Mental health court is a voluntary program in which defendants are given the option of taking their case through the normal channels of the criminal justice system or pleading into the mental health court program.

Mental health courts are currently serving in 16 counties in Oklahoma and as of January 2014, there were 426 participants in those mental health courts. Outcome comparisons for graduates between entry into the program and graduation show measurable differences in several areas like unemployment, days spent in inpatient settings, arrests, and days spent in jail.

Unemployment Percentage Rates

Number of Arrests

2C. Coordination with State and Related Justice Funds

The effort to coordinate the JAG Program with other federal programs continues to occur. This is accomplished within the various boards that provide oversight as well as increased collaboration with other state agencies that implement and/or receive federal funding in an effort to reduce duplication and maximize resources.

Coverdell Forensic Sciences Improvement Act Grant

The oversight body for the Coverdell Forensic Sciences Improvement Grant is the Forensic Sciences Improvement Task Force. The purpose of the Forensic Sciences Improvement Task Force is to improve the quality and timeliness of forensic science services to the criminal justice

system in Oklahoma and to reduce the backlog of forensic science cases. Since the goal of the JAG Program is to improve the functioning of the criminal justice system, with special emphasis on drug-related crimes, violent crimes and serious offenders and forensic labs are indelibly intertwined in these types of crimes, it is a coordinating effort that functions well and maximizes the funding efforts for both grant programs.

Residential Substance Abuse Treatment Program (RSAT)

A representative from the Department of Corrections serves on both the JAG Board as well as the RSAT Board and as such coordinates federal funding in providing residential substance abuse treatment for incarcerated offenders. Through the RSAT Board, the District Attorneys Council ensures coordination between the RSAT Program and the JAG Program.

In addition, Oklahoma Department of Corrections has continued to coordinate RSAT funding with Byrne JAG and other funding sources in order to continue current RSAT programs while adding additional-prison based treatment programs using evidence based models. Aftercare for prison-based treatment programs has also been coordinated to a Second Chance Act Demonstration grants for male offenders returning to Oklahoma County that was received in 2009 and the recently received Second Chance Act Demonstration grant funding focused on female offenders returning through the Tulsa Community Women's Reentry Project.

Additionally, the Oklahoma Department of Corrections continues to receive reimbursements under the State Criminal Alien Assistance Program (SCAAP). Some of those funds could continue to be used for SCAAP authorized correctional purposes to include supplemental RSAT funding as a means of continuing existing programs and potential expansion of programs.

3. ADDITIONAL STRATEGIC PLANNING AND COORDINATION EFFORTS

The Federal Grants Division of the District Attorneys Council coordinated closely with the Oklahoma Statistical Analysis Center (SAC) in developing an evaluation process for task forces. The SAC is housed in the Office of Criminal Justice Statistics within the Oklahoma State Bureau of Investigations (OSBI). The SAC serves as a clearinghouse for state criminal justice information in Oklahoma and is the central contact point for local, state, and federal criminal justice agencies. Extensive research was gathered by both surveys and personal interviews with all the task forces, and local law enforcement in their service area. The gathered information was then analyzed by SAC to create a preliminary evaluation for each task force. The preliminary report addressed their effectiveness in relation to the 12 critical elements for a successful task force, and their effectiveness in serving their community. The final evaluation is in the process of completion.

DeLynn Fudge, Director of the Federal Grants Division of the District Attorneys Council coordinated with the National Criminal Justice Association (NCJA) in developing the surveys that will be employed for developing the next four (4) year State Strategic Plan.

The Oklahoma Bureau of Narcotic and Dangerous Drugs (OBN) continues to coordinate with the JAG awarded task forces in their "Drug Endangered Children" program. This program seeks to end the cycle of drug abuse and dependency passed on from parent to child. OBN assists in coordination between the Multi-disciplinary teams across the state and the task forces. This coordination gives the task forces additional resources in addressing drug issues and the children that are sometimes byproducts of search warrants and subsequent drug arrests.

Several of the JAG awarded task forces closely cooperate with their local drug courts. Some have permanent seats on their local drug court and participate in the accompanying compliance checks. The task forces often make recommendations and referrals of offenders to use the drug courts when possible.

The District Attorneys Council also administers a number of the Office on Violence Against Women grants and in doing so also develops a three-year state strategy which guides the priorities and funding.

4. PLAN FOR COLLECTING AND SUBMITTING PERFORMANCE MEASUREMENT DATA

Currently, the District Attorneys Council requires a bi-annual progress reports from the subrecipients in order to collect and report performance measurement data. The subgrantees must submit narrative reports which are based on the funded project and the approved goals and objectives. In addition, narrative information on grant successes and barriers is required. However, Multijurisdictional Drug and Violent Crime Task Forces must also submit an additional four-page detailed report which requires the following:

- Federal Agency Coordination
- State Agency Coordination
- Local Agency Coordination
- Assists to Law Enforcement
- Number of Full-Time Personnel Funded
- Number of Part-Time Personnel Funded
- Number of Cases Prior to Reporting Period
- Number of Cases Initiated
- Number of Cases Closed
- Number of Cases Dropped
- Number of Cases Pending
- Number of Non-Drug Arrests
- Type of Violent Crimes Investigated
- Number of Search Warrants Served
- Number of Meth Related Search Warrants Served
- Number of Arrests Per Drug Offense Type
- Number of Firearms Seized
- Number of Meth Related Sites Mitigated or Cleaned Up
- Number of Illegal Immigrants Arrested in Conjunction with a Drug Arrest
- Number of Drug Offense Charges Per Offense Type
- Amount/Type of Drugs Removed
- Number of Prevention Programs Conducted
- Number of Professionals Trained
- Number of Law Enforcement Trainings Provided
- Number of Law Enforcement Professionals Trained

The bi-annual progress report is completed online in the OKGrants grant management system by the project director of the grant. The report is due 30 days after the end of the second and fourth quarter or January 30 and July 30, respectively. Submitting the bi-annual progress report is a special condition of the grant and a requirement of the subrecipients. If this performance measure data is not provided, subrecipients are placed on draw hold and are not allowed to draw any funds until the report is submitted.

In addition to the bi-annual progress report, the subgrantees are required to complete the Performance Measurement Tool (PMT) on a quarterly basis. The PMT is a Bureau of Justice Assistance (BJA) online data collection system. The reporting of the performance measures is comprised of two (2) sections, numerical data and narrative information. The numerical data is reported by the subgrantee for activities that occurred during the previous quarter, and the narrative information is reported annually by the grantee for the previous 12 months of activities.

Once the PMT data is completed by the subgrantee, the DAC Grant Specialist reviews the information and creates a report from the data entered. Annually, the aggregate PMT report which contains 12 months of numerical and narrative information is submitted into the federal Grants Management System (GMS). The data submitted into PMT by the subgrantee is individualized based on the approved budget categories for each subgrantee. JAG-Local Law Enforcement Grant data is entered directly into the PMT by the DAC Grant Specialist. Again, submitting the PMT data is a Special Condition of the grant and a requirement of the subrecipients. If this performance measure data is not provided, subrecipients are put on draw hold and are not allowed to draw any funds until the report is submitted.
