QUICK FACTS: CHILDREN'S EYE PROBLEMS

More than 12.1 million school-age children, or one in four, has a vision impairment. Among preschool-age children, more than one in 20 has a vision problem that can cause permanent sight loss if left untreated. The most common types of eye problems seen in children are:

- Myopia (nearsightedness)
- Strabismus (crossed eyes)
- Lazy Eye (amblyopia)

The most common causes of blindness among children are: congenital cataracts, retinopathy of prematurity and other complications caused by premature births.

Hospital emergency rooms treat thousands of children each year who suffer from eye injuries in and around the home. In general, the most common causes of eye injuries to children age 14 and younger are caused by:

- Toys not suitable for the child's age or abilities

- Pens and Pencils
- Household Cleaners

Each year, thousands of children suffer serious eye injuries while participating in sports. Wearing protective eye wear can help prevent nearly all of these injuries. The sports associated with the most injuries in children:

- Basketball
- Water Sports
- Baseball/Softball
- Soccer

About 90% of all eye injuries and 50% of all cases of blindness are preventable. You can help protect your child's sight by being aware of risks and taking proper precautions.

Prevent Blindness America recommends that children should have an eye exam shortly after birth, at six months of age, again at age 3 and periodically throughout the school years.

Founded in 1908, Prevent Blindness America is the nation's leading volunteer eye health and safety organization dedicated to fighting blindness and saving sight. Focused on promoting a continuum of vision care, Prevent Blindness America touches the lives of millions of people each year through public and professional education, certified vision screening training, community and patient service programs and research.

Table source: Prevent Blindness America. Based on statistics provided by the U.S. Consumer Product Safety Commission, Directorate for Epidemiology; National Injury Information Clearinghouse; National Electronic Injury Surveillance System (NEISS). Product Summary Report—eye injuries only—calendar year 2001. NEISS data and estimates are based on injuries treated in hospital emergency rooms that patients say are related to products. Therefore, it is incorrect when using NEISS data to say the injuries were caused by the product.
