C. SOLICITATION SPECIFICATIONS

C.1. Overview

The purpose of this document is to provide interested parties with information to enable them to prepare and submit a proposal for an Information Architecture and Metadata Repository (IAMR) Tool. The State of Oklahoma (State) as represented by the Office of Management Enterprise Services – Information Services Division (OMES), on behalf of the Oklahoma State Department of Education (OSDE) intends to use the results of this solicitation to award a contract for an IAMR Tool.

In addition to the, IAMR Tool, OSDE is also seeking proposals for Services for **population of the baseline –as-is architecture**. The awarded contractor will work with the OSDE program offices to populate the metadata repository and information architecture tool. **Offeror may submit a proposal for the Installation and Configuration of the IAMR Tool only, or both the Tool and Services.**

*****Please note*** proposals submitted for Services (Maintenance/ Support) only will not be accepted.**

C.2. Background

In 2011, the Oklahoma State Legislature established a vision for a State Longitudinal Data System. The overall intent of this system is to provide Oklahoma stakeholders with information that addresses critical questions about student progress and the quality and costs of the education in the State. The proposed system should incorporate data that allows the State to address the States' prioritized research and policy questions.

To assist with the design and operation of the data system, the Legislature created the P20 Council with the task to implement a P20 Student Longitudinal Data system. As a result of this effort, OSDE applied for and was awarded a three (3) year grant to stand up and implement a Student Longitudinal Data System for K-12 education.

The essential notion behind establishing a P20 State Longitudinal Data System is that decisions are only as good as the data on which they are based. As the State transforms data into information to facilitate wise decision-making, users and managers of K-12 data need to establish data definitions, data and process ownership and authority, accountability, security, and reporting needs and requirements. The goal of the P20 data governance effort is to bring clarity and understanding to these issues. A critical step in attaining a successful State Longitudinal Data System is the building of the data dictionary so that we can understand the data to create a metadata repository.

The goal of the Information Architecture deliverable for the grant is to help find the most efficient way for the State to act on its strategies. In order to build strong information architecture the State first needs to understand the relationships in the data. The IAMR Tool should provide the ability to meet these goals, and assist OSDE and the State in being stewards of the data that it collects and receives.

The State desires to purchase an information architecture software tool, complete with installation and training. Ideally, the proposed tool shall allow the State to define and store metadata. The State is adopting information architecture practices to manage complexity, increase productivity, and align the business with technology. As the main governance body for K-12 education in the State, demands upon OSDE's services are constantly changing and evolving. Having deeper insight into how the business functions and existing IT assets give OSDE the intelligence necessary to adapt to these demands successfully. Currently, OSDE uses Excel spreadsheets and Visio diagrams to capture the information architecture models and design information generated, but only as a temporary measure. A more efficient and feature rich toolset is required.

OSDE is simultaneously initiating a metadata collection process and needs tools to store and present this information. This gives OSDE the ability to present metadata, and use each of the defined data elements as architecture artifacts throughout the tool. OSDE can use this information to efficiently plan and track the impact of changes.

C.3. Objective and Scope of Work

The Voluntary Product Accessibility Template is a tool to assist in making preliminary assessments regarding the availability of electronic and information technology products and services with features that support accessibility.

The VPAT provides a summary view of criteria specific to various types of technologies identified in the Oklahoma Information Technology Accessibility Standards. There are three sections in each table. Section one of the Summary Table describes each section of the Standards. The second section describes the supporting features of the product or refers you to the corresponding detailed table, "e.g., equivalent facilitation." The third section contains any additional remarks and explanations regarding the product.

Oklahoma EITA Procurement Clause:

Pursuant to Title 74, Section 85.7d and OAC 580:15-6-21 electronic and information technology procurements, agreements, and contracts shall comply with applicable Oklahoma Information Technology Accessibility Standards issued by the Oklahoma Management and Enterprise Services.

EIT Standards may be found at www.ok.gov/DCS/Central_Purchasing/index.html or http://www.ok.gov/OMES/documents/isd_itas.doc.

- 1) For Information Technology or Communications Products, Systems and Applications not requiring development and/or customization. The contractor shall provide a description of conformance with the applicable Oklahoma Information Technology Accessibility Standards for the proposed product, system, or application by means of either a Voluntary Product Accessibility Template (VPAT) or other comparable document, upon request.
- 2) For Information Technology or Communications Products, Systems or Applications requiring development and/or customization. The contractor shall provide a description of conformance with the applicable Oklahoma Information Technology Accessibility Standards for the proposed product, system, or application developed and/or customized by means of either a Voluntary Product Accessibility Template (VPAT) or other comparable document, upon request. Additional requirements and documentation may be required and compliance shall be necessary on the contractor's part. Such requirements shall be stated in documents such as State Bids, Request for Proposals, Contracts, Agreements, Purchase Orders, and Amendments.

All representations contained in the VPAT or other comparable document provided will be relied upon by the State for accessibility compliance purposes.

How to Get Started - Begin with your product's specification or a list of its known features:

1. Determine which subsection(s) of the Oklahoma Information Technology Accessibility Standards (IT Standards) apply to your product. Document the product's ability to meet the standards in the applicable areas, such as software, operating system, and so on.
2. For each standard in the applicable area(s), determine if the product meets or supports the standard.
 - If the product appears to meet or support the standard, then you have the option of providing examples of features that are accessible or of specific accessibility features that exist.
 - If the product appears to not meet the standard, remember that the OK Information Technology Accessibility Standards allow for alternative products provided that they result in substantially equivalent or greater access. The product can meet the standard as long as the feature performs in the same manner as it does for any other user. This is called "functional equivalency."
3. When the VPAT draft is complete, translate the technical language into language that will be understood by a state agency procurement officer. We encourage use of suggested language noted in the section "Suggested Language for Filling out the VPAT".
4. **Suggested Language for filling out the VPAT**
Suggested language below has been developed for use when filling out a VPAT. All or some of the language may be used. You are encouraged to use consistent language in VPATs throughout the form.

Supporting Features

Supports	Use this language when you determine the product fully meets the letter and intent of the criteria.
Supports with Exceptions	Use this language when you determine the product does not fully meet the letter and intent of the criteria, but provides some level of access relative to the criteria.
Supports through Equivalent Facilitation	Use this language when you have identified an alternate way to meet the intent of the criteria or when the product does not fully meet the intent of the criteria.
Supports when combined with Compatible AT	Use this language when you determine the product fully meets the letter and intent of the criteria when used in combination with compatible AT. For example, many software programs can provide speech output when combined with a compatible screen reader (commonly used assistive technology for people who are blind).
Does not Support	Use this language when you determine the product does not meet the letter or intent of the criteria.
Not Applicable	Use this language when you determine that the criteria do not apply to the specific product.
Not Applicable - Fundamental Alteration Exception Applies	Use this language when you determine a fundamental alteration of the product would be required to meet the criteria (see the IT Standards for the definition of "fundamental alteration").

Remarks & Explanations (third section on VPAT)

Providing further explanation regarding features and exceptions is especially helpful. Use this section to detail how the product addresses the standard or criteria by:

- Listing accessibility features or features that are accessible;
- Detailing where in the product an exception occurs; and
- Explaining equivalent methods of facilitation (See Section 3.5 of the IT Standards for definition of "equivalent facilitation").
