Safety Guidelines for reopening Barber and Cosmetology Salons

REVISED FOR PHASE 2

It is acknowledged that all services within the Professional Beauty Industry (Cosmetology, Barbering, Nails and Esthetics) carry some risk in this viral environment due to the nature of the services provided and the inability to maintain social distancing. With that said, all licensed professionals in the Cosmetology and Barber industry have been trained to a national standard to mitigate these risks significantly through the use of proper infection control standards required by the Oklahoma State Board of Cosmetology and Barbering regulatory licensing rules and regulations.

The following recommendations, therefore, are enhancements to those existing rules and they address the unique scenario presented by the COVID-19 pandemic. In all professional Cosmetology and Barber related educational curriculums, students are taught the definition of Universal Precautions. Therefore, in this environment we are going to follow all Universal Precautions and assume that everyone is COVID-19 positive and take all the precautions necessary to mitigate the risk of the spread while still performing services.

In light of the COVID-19 pandemic, the Oklahoma State Board of Cosmetology and Barbering recommends moving into PHASE 2. Cosmetology and barbering related establishments and schools, shall follow these guidelines in order to protect the safety of clients and employees. The recommendations should be used in conjunction with the Boards established rules and regulations that are currently in place.

• **Appointments** - Establishments should see clients by appointment only and should consider using telephone, text messaging, or online scheduling to establish appointments. It is recommended that clients wait outside the establishment until the licensee is ready to serve them. **However**, the establishments may accommodate more clients as long as they maintain social distancing guidelines. Advise clients that the salon/shop is limiting guest inside the establishment to only those individuals that are receiving services, all other individuals should wait outside the establishment.

• **Establishments that work with walk in traffic only** - Are required to establish a number system or some type of check in system for customers. They can have numbers available for clients to pick up at the door or just inside the establishment so clients can maintain social distancing guidelines while waiting outside by either remaining in your vehicle or keeping the recommended spacing. Stylists can notify customers by displaying or notifying the waiting customers of the next number being served when the licensee is ready. Employers will be held accountable for allowing their employees to have enough time for proper disinfection without repercussion between appointments.

• **Distancing** – It is acknowledged that social distancing recommendations of 6 feet cannot be met in the actual service itself, however; the following distancing measures can be instituted to reduce risk:
  - Spacing between persons in the salon should be at least six feet at all times. Establishments should consider additional spacing between booths, divider shields, and/or alternate work schedules to accomplish this.
  - Maintain social distancing guidelines within the establishment including the break room, waiting area, classroom, or clinic/salon/shop area.
Personal Protective Equipment-

- **Masks** – Establishment employees/workers/booth renters etc.: In the Governor’s PHASE 2 plan, mask will be recommended, but not required, to wear to protect your health and safety as well as the clients. Clients also are recommended to wear face masks to the extent possible while receiving services and/or should be supplied with a clean towel to hold over their mouth and nose.
- **Face Shields** – If available, face shields may be worn instead of masks.
- **Gloves** – It is not recommended that employees wear disposable gloves when servicing clients, however; they must adhere to the existing rules regarding hand washing before and after each service and any other time necessary.
- **Capes** - Each client should be draped with a clean cape. Capes should be disinfected between every use, using a disinfectant spray or disinfectant wipe or a clean disinfectant saturated towel and allow to set according to recommended contact time of the product used. Disinfectants can be mixed according to directions and put in a spray bottle for use. Technicians should have several clean/disinfected capes available at all times.

  Capes should be laundered at the end of the day following the fabric recommendations.

- **Neck strips/towel** – Employees should use protective neck strips/towels around the neck and under the cape of each client.
- **Smocks** - There are no recommendations to wear smocks/gowns at this time. Due to the nature of the transmission, this does not offer additional significant protection.

- **Hand Hygiene** - Proper hand hygiene is documented to be an essential action to reduce the spread of viral illness. Washing hands with soapy, warm water, for a minimum of 20 seconds will be required by employees between every client service and as frequently as possible, but always after eating, smoking and using the restroom.

- **PPE** - The items such as gloves, gowns, drapes, linens, towels etc. when used should be cleaned and disinfected or discarded in a closed container immediately after use.

Disinfection –

- All salons/shops should be thoroughly cleaned and disinfected prior to reopening. Disinfect all surfaces, tools, and linens, even if they were cleaned before the salon/shop was closed.
- Use disinfectants that are EPA–registered and labeled as bactericidal, virucidal and fungicidal. No product will be labeled for COVID-19 yet, but many will have human coronavirus efficacy either on the label or available on their website. The EPA has approved any product that has tested as effective against human coronavirus. If in doubt of the effectiveness, check the EPA website.
- Disinfectant for immersion of tools, must be mixed daily and replaced sooner if it becomes contaminated throughout the workday. Disinfectant only works on a clean surface so clean all surfaces and tools with hot soapy water, or cleaning wipes (if using wipes, be sure to cover surface thoroughly) before disinfecting.
- Contact time on label must be observed for disinfectant to work. Contact time refers to how long the disinfectant is visibly wet on the surface allowing it to thoroughly destroy all the pathogens.
- Disinfectants used for immersion must be changed daily or sooner if it becomes contaminated (ex: hair/debris floating in solution or cloudy solution.)
Disinfection is for hard non-porous surfaces, glass metal and plastic. Porous/soft surfaces cannot be disinfected and must be used only one time and then discarded (tools such as cardboard files, buffers, drill bits etc.)

Launder all linens, towels drapes, capes and smocks in hot soapy water and dry completely at the warmest temperature allowed. (till they are hot to the touch). Store clean linens in an enclosed cabinet or closed container. Store all used/dirty linens in an enclosed container.

The use of a face mask is recommended. Placing a clean towel over the face of your client while at the shampoo sink is a good way to protect their eyes, nose, and mouth. Avoid up-close unprotected direct face-to-face contact with clients whenever possible.

**Reception area** -
- Remove all unnecessary items such as magazines, newspapers, service menus, any other unnecessary paper products and decor. Remove public water or coffee stations, candy dishes, product samples, etc.
- Wipe down all seats and tables. Cloth chairs cannot be properly cleaned and disinfected, using a plastic cover should be considered.
- Disinfection of high touch areas including, but not limited to: Door handles on main entrance and restrooms
  - Restrooms
  - Reception desk
  - Point of sale equipment
  - Stations (including foot/nail drying stations)
  - Displays and display products
  - Avoid client touching products that they do not plan to purchase
- Employees should frequently wash their hands after the using the phones, computer, cash register and/or credit card machine. Wipe these surfaces between each use.
- Clean and wipe all door handles and other surfaces that are regularly touched by clients and staff with disinfectant wipes.

**Restrooms** -
- Clean and disinfect ALL restroom surfaces including floors, sinks and toilet bowls. Store paper products in a closed cabinet. Place trash can near the door or within reach of the door. Remove anything that does not have to be in the restrooms. Restroom are required to be supplied with liquid soap and paper towels. No cloth towels.

**Shampoo Bowls** -
- Clean and disinfect all bowls, hoses, spray nozzles, faucet handles, shampoo chairs and arm rests. Wipe down all back-bar products and shelves. Discard and replace any products that have not been stored in a closed container.
- Employees should avoid up-close unprotected direct face-to-face contact with clients while providing shampoo services. Clients may wear face masks to the extent possible while receiving services and/or should be supplied with a clean towel to hold over their mouth and nose.
• **Salon/Shop/Clinic Areas** -
  - Clean and disinfect all work area surfaces. Clean and disinfect chairs, head rest, and arm rests. Clean and disinfect all reusable tools and store in an airtight closed container. Clean and disinfect all appliances, sheers, clippers, clipper guards, clippies, rollers, combs, brushes, rolling carts and any other items used in connection with servicing clients.
  - Check to make sure all products such as lotions, creams, waxes and scrubs have always been in a closed container, if not you must discard and replace.
  - Remove and discard all single use tools such as paper files, drill bits and buffers, that have already been used.
  - Clean and disinfect all linen hampers. Clean and disinfect trash containers and replace trash liners daily or more often as needed. Trash Containers should have a lid that can be closed.

• **Pedicure Bowls** -
  - Remove all parts that can be removed.
  - Clean all removed parts with soap and water, rinse in clear water and then immerse into properly diluted disinfectant for full recommended contact time.
  - Scrub bowl with soap and water and replace removed parts to bowl.
  - Rinse in bowl with clean water.
  - Fill bowl again with clean water and proper amount of disinfectant and let stand for proper contact time requirements.
  - If your bowl has jets, allow the jets to run for a full 10 minutes with disinfectant solution.

• **Treatment rooms** -
  - Clean and disinfect all surfaces such as, chairs, tables, electrical appliances (don’t forget the cords).
  - Clean and disinfect all linens and store in a closed container/cabinet.
  - Empty all wax pots and disinfect before refilling them with new wax. Single use applicators must be used only one time and then discarded after each use. (do not double dip).

**Administrative Controls** -
- Employees who are sick will be expected to stay home.
- Post handwashing signs in the restrooms as a reminder.
- Be flexible with work schedules/salon hours to reduce the numbers of people (employees and clients) in salons/shops at all times in order to maintain social distancing.

**The above guidelines are the minimum requirements at this time.**
Establishment owners/managers may implement other safety protocol procedures to support these guidelines.
