

ATTACHMENT A

SOLICITATION NO. 8350000042

This Solicitation is a Contract Document and is a request for proposal in connection with the Contract awarded by the Office of Management and Enterprise Services as more particularly described below. Any defined term used herein but not defined herein shall have the meaning ascribed in the General Terms or other Contract Document.

PURPOSE

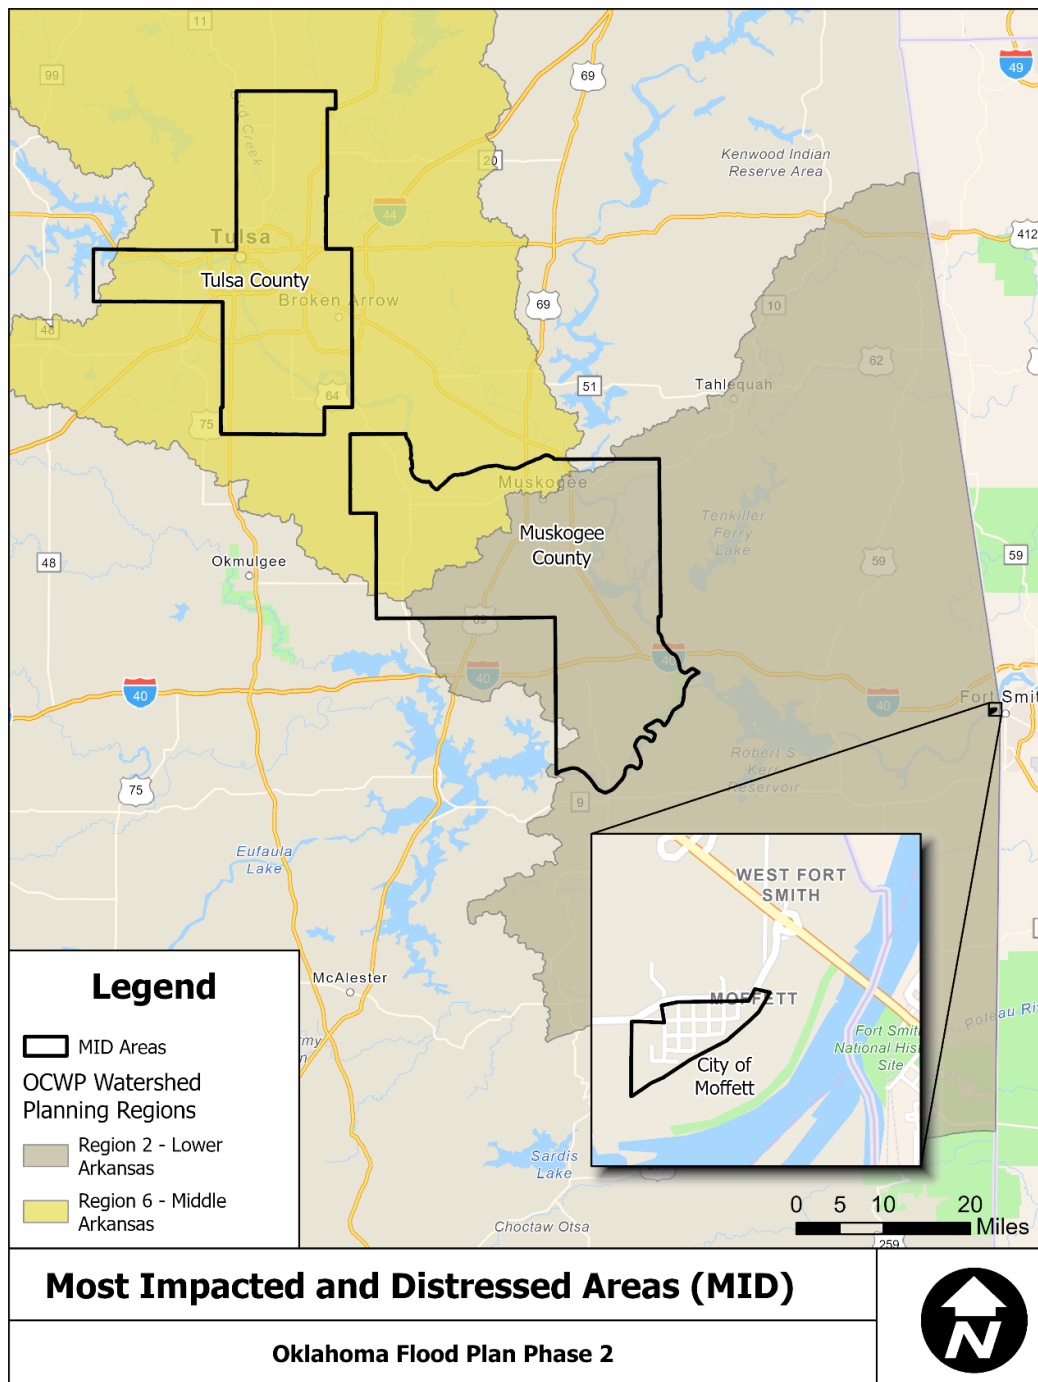

The Contract is awarded on behalf of the Oklahoma Water Resources Board for engineering firms who are interested in providing general engineering services and assistance in seeking additional federal funding related to the State of Oklahoma's comprehensive state flood plan phase 2.

BACKGROUND

OWRB is planning to conduct a phase 2 of the State Flood Plan that includes developing hazard mitigation projects and alternatives within the Arkansas River watershed, which encompasses Tulsa County, Muskogee County, and the Moffett Zip code. The stated communities are identified as the Most Impacted and Distressed areas by the United States Department of Housing and Urban Development from the 2019 flood event in Oklahoma. During Phase 1, which is currently in process, the OWRB will prioritize projects for Phase 2 and include at least one project in each of the three MID areas. Depending on the projects prioritized for scoping in Phase 1, work in Phase 2 may include:

- Scoping and developing hazard mitigation projects and alternatives, including engineering design and feasibility studies;
- Conducting meetings, outreach, and coordination with potential sub-applicants and community residents;
- Incorporating environmental planning and historic preservation considerations into project planning activities;
- Collecting data for Benefit-Cost Analyses, environmental compliance, and other program requirements;
- Conducting hydrologic and hydraulic studies for unmapped flood zones or other areas where communities propose to submit hazard mitigation projects;
- Coordinating, scoping, and developing regional or multi-community hazard mitigation projects that require coordination to address resiliency and sustainability goals cohesively;
- Utilizing third-party cost estimation services for project budgeting across sub-applications;

A map showing the three MID areas of the 2019 flood event, and their location within the Arkansas River Watershed, is included below.

Actual Scope of Engineering Services would be agreed upon through a written contract and depend on the activities that would be funded by various grants including but not limited to FEMA Hazard

Mitigation Grant Program (HMGP), FEMA Building Resilient Infrastructure and Communities (BRIC), and US HUD Community Development Block Grant – Disaster Recovery (CDBG-DR).

The project should be completed by February 15, 2025.

FUNDING

It is anticipated that the funds to pay for these services will be provided by US HUD under its CDBG-DR programs in the amount not to exceed \$500,000,00. Future funding will be dependent upon a number of factors including but not limited to budget approvals and funding availability.

If additional funding becomes available through federal fund such as FEMA's Flood Mitigation Assistance (FMA), Hazard Mitigation Grant Program (HMGP), or Building Resilient Infrastructure and Communities (BRIC) Programs, OWRB will identify additional areas within the Arkansas River Watershed. OWRB plans to leverage CDBG-DR funds with FMA and BRIC project scoping money.

1. Contract Term and Renewal Options

The contract term, which begins on the effective date of the Contract, is one year and there are [THREE] one-year options to renew the Contract.
