IMPORTANCE OF DATA COLLECTION

A motor vehicle collision report includes information that describes characteristics of the events, vehicles and persons (drivers, injured and uninjured occupants, injured pedestrians and bicyclists, etc.) involved in the collision. Law enforcement investigates the collision at the scene and documents the information on the collision report.

Data recorded on collision reports are computerized and merged into a central electronic collision data file at the Department of Public Safety, Records Management Division. In addition, the Department of Transportation, Traffic Engineering Division enhances location data.

These collision databases provide the basic information necessary for developing effective highway and traffic safety programs. It is the most reliable way to analyze and evaluate data to increase public awareness of highway safety issues. Data from Oklahoma's collision data systems are used to:

- Identify and prioritize highway and traffic safety problem areas
- Initiate and evaluate the effectiveness of laws and policies intended to reduce deaths, injuries, injury severity and costs
- Assess the relationship between vehicle and highway characteristics, collision propensity, and injury severity to support and evaluate countermeasures
- Draw public/media attention to a traffic safety issues and problems
- Provide justification for existing traffic safety programs or illustrate a need for new programs
- Help provide grant funding
- Communicate the importance of data

National standards used in development of the new Oklahoma Official Traffic Collision Report (OOTCR) and Official Oklahoma Traffic Collision Report Instruction Manual (OOTCRIM) include: (1) Model Minimum Uniform Crash Criteria (MMUCC), (2) ANSI D16.1-1996 Manual on Classification of Motor Vehicle Traffic Accidents, 6th Edition and (3) ANSI D20-2003 Data Element Dictionary for Traffic Records Systems.

By using these standards, Oklahoma is taking part in the traffic records and traffic safety communities (nationally and locally) to create data that is understood through consistent definitions and meanings. Oklahoma's collision report data provide information for national collision information systems, either as the sampling frame or as a source of data. Data from these national systems are utilized in highway safety decision making by agencies at all levels of government and the private sector such as the automobile industry.

Collisions result in an economic cost of increased insurance rates, increased medical expenses, loss of property, loss of life and loss of personal income. They produce a drain on law enforcement in both time and money, and pose a personal risk to every driver, passenger and pedestrian in Oklahoma.

Your efforts in accurately collecting and reporting collision data will help immeasurably.

Article I. Collision Report Protocols

Collision report forms are available from the Department of Public Safety or may be printed from the following website: www.dps.state.ok.us. Adobe Acrobat version 7.0 or above is required.

The DPS records Management Division is not authorized to change an officer's report. Therefore, it is imperative that delayed fatality collisions are updated and resubmitted within two weeks of notification of the fatality. If a person expires within thirty (30) days of the collision as a result of injuries sustained in the collision, it shall be counted as a traffic fatality, and a revised report shall be submitted.

The mailing address for collision reports that are not submitted electronically is:

Department of Public Safety
Records Management Division
P. O. Box 11415
Oklahoma City, OK 73136

Collision Report Forms – The pages are as follows:

1. Collision Report - DPS: 0192-01 REV 0107 (-01through -04) (4 pages total)
2. Persons Supplemental - DPS: 0192- SUPP01 REV 0107 (1 page)
3. Diagram Supplemental - DPS: 0192- SUPP02 REV 0107 (1 page)
4. Additional Narrative - DPS: 0192- SUPP03 REV 0107 (1 page)
5. Statement of Witness - DPS: 0192- SUPP04 REV 0107 (1 page)

This section of the Manual will provide general guidelines concerning the completion of the collision report forms. The guidelines cover procedures and recommendations that should be used when completing all forms and parts of the collision report.

Throughout the report, "0" or "00" indicate Not Applicable, and "9" or "99" denote Unknown. All data sections must have data entered unless otherwise specified.

Data Section – A data section may consist of a data box, a data block, a data block group, an unstructured data box or a combination of these elements.

□

Data Box – Some data sections contain individual square(s) designed for indicating an item by placing an "X" inside it. "X" is the only acceptable entry in these data sections.

Data Block – Some data sections contain an individual block designed to receive one alphanumeric character of information.

Data Block Groups – Some data sections contain a group of data blocks.

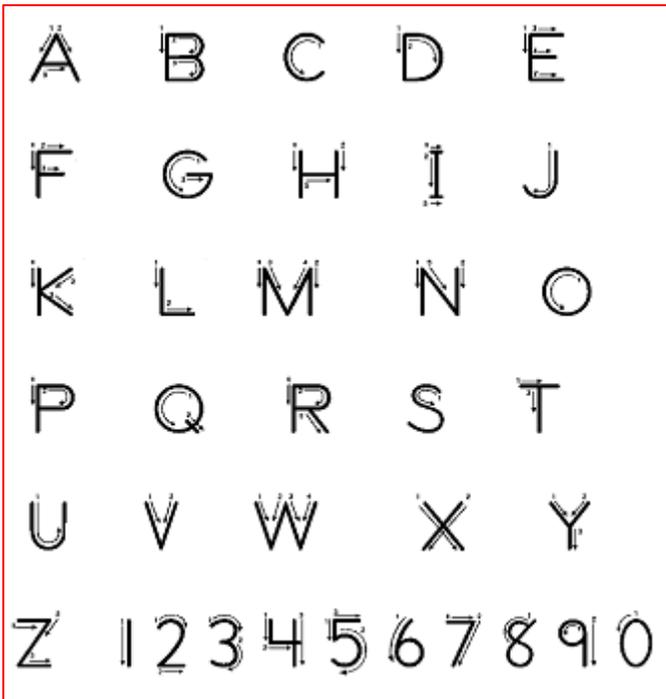

1. Alphanumeric characters must stay within blocks.
2. Use of capital block letters is required.
3. All boxes are left to right entry beginning in far left.
4. No hyphens/dashes are allowed in any of the data boxes, except for data sections that allow agency preferences, i.e. Section 10-CASE NUMBER.

Unstructured Data Box – An open field with no data blocks. Neat capital block letters are required.

Writing Tools – Typewritten or computer generated forms are preferred. If the form is handwritten, use a black ballpoint or roller-ball pen. The form must be completed in black ink. Pencils are not allowed, except in the diagram.

Writing Example – Figure Writing Example-1 is an example of the optimal block handwriting for the form.

Writing Example-1

Justification – All entries are left justified except where specifically noted.

White-out or correction tape – The use of white-out or correction tape is discouraged. If used, it is to be used sparingly and neatly. Do not obscure any data.

The Department of Public Safety (DPS) provides two types of forms: a pre-printed form for handwritten entry and a computer fillable form in PDF format. The pre-printed form can be obtained from the DPS Supply Division. The computer fillable PDF form can be downloaded from the DPS web site at www.dps.state.ok.us.

A typewritten or computer generated form shall not contain any handwritten entries except in Section 213-DIAGRAM or the SUPPLEMENTAL DIAGRAM.

A handwritten form shall not contain any typewritten or computer generated entries except in Section 213-DIAGRAM or the SUPPLEMENTAL DIAGRAM.

Data sections that are not required for an additional unit shall be left blank, i.e. a collision containing an odd number of units.

Data sections that are not required for witnesses, property owners or additional occupants shall be left blank.

For each individual data section, incomplete information shall be considered UNKNOWN. List partial information in Section 221-REMARKS. Example: Partial License Plate Number.

In an official Work Zone, the closed portion of a roadway is considered to be off roadway.

If any part of a traffic unit of this type is involved in a collision to the extent of inflicting/receiving injury or

damage to/upon any person or property, the motor vehicle doing the hauling, pushing, or towing is considered as the traffic unit and should be shown as such. (ANSI D16 1-1996, sections 2.2.7 through 2.2.26)

- e) If a driverless, towed vehicle or a driverless, pushed vehicle is damaged, describe this vehicle in the Remarks Section, i.e., color, year, make, model, VIN, license tag. Example: If a motor vehicle is towing another vehicle and the towed vehicle inflicts or receives injury or damage, the motor vehicle doing the towing would be considered as the actual unit in the collision. This applies even though the towed vehicle might have become detached prior to the actual impact if the towed vehicle is still moving under impetus from the motor vehicle doing the towing.
- f) If the towed or pushed vehicle is occupied by a driver who is controlling the vehicle, this unit would be listed as a separate unit in and of itself and would be shown in the appropriate Unit section of the Collision Report Form.
- g) Do not include non-contact vehicles. Non-contact vehicles may or may not be recorded on collision reports. Information about a non-contact vehicle may be recorded for legal purposes, but such vehicles are not counted for statistical purposes.

39) UNIT:

(5) Unit

- a) This data section shall not be left blank.
- b) Units shall be listed sequentially beginning with non-contact units, if any are involved, followed by contact units.
 - i) Non-contact units shall be labeled sequentially "A", "B", etc. (include a leading zero for all non-contact units).
 - ii) Contact units shall be labeled "1" to "99" (include a leading zero for contact units numbered "1" to "9").
 - iii) Entry of a leading zero is not required for any unit, if using TraCS or CRS.
 - iv) The number or letter assigned to the unit has no meaning other than identification.
- c) Definitions of Contact and Non-Contact unit.
 - i) Contact unit: A contact unit is any unit that comes into contact with one or more units, or property in a collision. A contact unit is directly involved in a collision. An example of a contact unit is:
 - (1) If a vehicle is carrying a load, the load is considered to be part of the vehicle. If the load shifts or falls off the vehicle and strikes another vehicle, the vehicle with the load is a contact unit.
 - ii) Non-contact unit: A non-contact unit is any unit other than a contact unit that contributes (directly or indirectly) to the collision. Some examples of a non-contact unit are:
 - (1) A vehicle changes lanes into the path of another vehicle (without making contact) causing a collision. The vehicle changing lanes is a non-contact unit.
 - (2) A pedestrian darts into the roadway causing a motor vehicle to stop suddenly without striking the pedestrian. A following vehicle swerves to avoid the stopped vehicle and collides with a fixed object. The first vehicle and the pedestrian are non-contact units.

40) OCCUPANTS:

Occupants	

- a) This data section shall not be left blank.
- b) Enter "00" if
 - i) Section 41-UNIT TYPE is "P", "X" or "A" or
 - (1) A pedestrian conveyance "X" is not a transport vehicle (ANSI D16.1 Section 2.1.3, Edition 2007).
 - ii) Section 41-UNIT TYPE is "D", "C" or "T" and there are no occupants.
- c) Enter "99" if the number of persons in or on the unit is unknown.
- d) Enter "1" through "97" to indicate the number of persons in or on the unit, including the driver if Section 41-UNIT TYPE is "D", "B", "Z", "C", or "T". Include a leading zero for quantities 1 through 9.

Transport vehicle (ANSI D16.1 Section 2.1.4, Edition 2007): A transport vehicle consists of one or more devices or animals and their load. Such devices or animals must include at least one of the following:

- a. a transport device, or a unit made up of connected transport devices, while idle or in use for moving persons or property from one place to another,
- b. an animal or team of animals while in use for moving persons or property other than the animal or team itself from one place to another, or
- c. a movable device such as construction, farm, or industrial machinery outside the confines of a building and its premises while in use for moving persons, the device itself, or other property from one place to another.

If such a device or animal has a load, the load is part of that transport vehicle. Loads include:

- persons or property upon, or set in motion by, the device or animal
- persons boarding or alighting from the device or animal
- persons or property attached to and in position to move with the device or animal

If the load upon a transport device includes another transport device, the entire unit including the load is considered to be a single transport vehicle. With the exception of the following:

- Pickup truck while being used to power a saw
- Dump truck while spreading its load
- Tow truck while using its winch
- Jeep while pulling a device picking up golf balls
- Transit-mix concrete truck while discharging its load
- Dump truck while plowing snow
- And others

- a) This data section shall not be left blank.
- b) Enter the appropriate unit type into the data box.
 - i) D - Driver - A driver unit is a transport vehicle that has an occupant who is in actual physical control or, for an out-of-control vehicle, had an occupant who was in control until control was lost.
 - (1) A disabled, stopped or parked transport vehicle on the roadway is a "D" unit, whether occupied or unoccupied.
 - (2) A working vehicle stopped on or off the roadway is a "D" unit, whether occupied or unoccupied. An extended definition of a working vehicle is in Appendix D.
 - ii) P - Pedestrian - Any person afoot. For an example of a filled collision report involving a pedestrian, see Appendix H. In the case of a minor (17 years of age or younger), list the parent's or legal guardian's name and address in vehicle owner's section (Sections 96-103).
 - iii) X - Pedestrian Conveyance – A pedestrian conveyance is a device, other than a transport device, used by a pedestrian for personal mobility assistance or recreation. These devices can be motorized or human powered, but not propelled by pedaling (ANSI-D16.1, 2.2.6.1). Examples would be a Segway or other scooter.  - vi) C - Parked Car – A motor vehicle not in transport, other than a working vehicle, that is not in motion and not located on the roadway. (ANSI D16.1, Section 2.2.34.2, Edition 2007). An extended definition of working vehicle may be found in Appendix D. For an example of a filled collision section with parked car, see Appendix H.
 - (1) A "C" unit is a legally or illegally parked unit that is not on the roadway.
 - (2) A "D" unit is a legally or illegally parked unit on the roadway.
 - vii) A - Animal - A collision involving an animal that is not occupied. For an example of a filled collision section with animal, see Appendix H.
 - (1) A collision with an animal may or may not be an incident.
 - (2) A report must be completed if there is five hundred dollars (\$500.00) or more in total property damage; OR personal injury resulting from a collision with an animal.
 - (3) This section applies to both domestic and wild animals.
 - viii) T - Train - A steam engine, diesel, electric or other motor, with or without cars coupled thereto, operated upon rails, except streetcars on trafficway. For example of a filled collision section with a train, see Appendix H.

- (1) A high rail car or railway maintenance vehicle operated on rails shall be designated as a train.
 - (a) A high rail car is a vehicle equipped with tire and rail wheels which can be operated on roads or rails.
 - (b) Note in Section 221-REMARKS if the unit is a high rail car or railway maintenance vehicle.

43) COMMERCIAL MOTOR VEHICLE:

CMV	<input type="checkbox"/>

- b) Indicate if this unit is a commercial motor vehicle, if Section 41-UNIT TYPE is "D" or "C".
- c) A Commercial Motor Vehicle is defined as a vehicle used for commerce/business and has a GVWR/GCWR in excess of 10,000 lbs., or is required to have a hazmat placard, or is a bus with seating for nine or more including the driver. The definition of a Commercial Motor Vehicle is not dependent on the license plate displayed on the vehicle.

GVWR - Gross Vehicle Weight Rating - The GVWR is the rating issued by the vehicle manufacturer and is the combination of the vehicles actual weight and the maximum recommended cargo weight.

The GVWR of a vehicle can be located on most single unit or powered vehicles on a manufacturer's plates or on the Nader sticker.

The vehicle registration certificate **IS NOT** an appropriate source of the GVWR. The weight recorded on the registration certificate is the legal registered combined weight of the vehicle.

GCWR – Gross Combination Weight Rating - The GCWR is the combination of GVWRs from two or more vehicles which include the tow vehicle and the vehicles being towed.

This is the combination of the GVWR's of the towing and towed vehicles. In the absence of a GCWR specified by the shipper, GCWR should be determined by adding the GVWR of the power (towing) unit and the total weight of the towed unit(s) and any load thereon.

Generally, a single (straight) truck has a GVWR; any combination of trucks and trailers has a GCWR, the manufacturer's Gross Vehicle Weight Rating for the trailer or trailers combined.

- c) Enter the motor carrier name of the unit listed in Section 152-UNIT.
 - i) A motor carrier is defined as "the business entity, individual, partnership, corporation, or religious organization responsible for the transportation of goods, property or people." The identity of the carrier is often not the same as the owner of the truck. Carrier names are sometimes displayed on the side of the truck, but this information may or may not be correct. Officers should ask the driver the name of the carrier under whose authority the load is being transported.
 - (1) Example: Driver John Smith owns the tractor that he is driving. Driver Smith has leased his truck to GoFast Trucking and is pulling a GoFast Trucking trailer, or one that he may have leased to GoFast Trucking as well, delivering goods for-hire. The tractor registration shows John Smith as the owner. The marking displayed on the side shows GoFast Trucking and their U.S. DOT Numbers.
 - (a) A check of the logbook and load manifest indicates GoFast Trucking as the carrier. The Single State Registration shows GoFast Trucking. In such an instance, GoFast Trucking would be the carrier and should be shown as such on the crash report.
 - ii) Review the following "How to find the correct U.S. DOT number and Carrier Name" document.
- d) The name and address must be the same as in the SAFER web site: <http://www.safersys.org/>.

HOW TO FIND THE CORRECT U.S. DOT # AND CARRIER NAME

SIDE OF THE VEHICLE

This is good in 90% of the cases for name and number. Look for a # preceded by the letters USDOT

...BUT...

DON'T STOP!

Keep on moving – the information on the side of the truck may not be the U.S. DOT #, name or address of the responsible motor carrier.

DRIVER INTERVIEW

1. Is the truck leased or rented?
2. Who is the motor carrier responsible for this load?
3. Who is directing & controlling the movement of this vehicle?
4. Where is the motor carrier's principle place of business?

LEASE AGREEMENT

Identifies the name of the lessee.

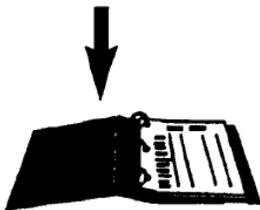

DRIVER'S LOG

Contains the name of the motor carrier, city, and state for the principal place of business.

BILLS OF LADING / SHIPPING PAPERS

Provide the name of the motor carrier responsible for the load.

Vehicle Registration

Generally good for identifying the owner or registrant.

CAREFUL – This may not be the responsible carrier.

YOU CAN MAKE A DIFFERENCE!

All roadside inspection and accident reports are uploaded to SAFETYNET which monitors motor carrier Out-of-Service and crash rates.

By properly identifying the motor carrier on this report YOU will provide the important data needed to identify high risk motor carriers!

IMPORTANT

The more items that “match” or agree, the better chance of properly identifying the motor carrier!!

HOW TO FIND THE CORRECT U.S. DOT # AND CARRIER NAME (Carrier Identification Reference Card)

This sheet has been designed as a quick reference to aid any Inspector or state officer in correctly identifying the motor carrier and/or U.S. DOT number for purposes of reporting accidents or inspections.

It was create so that when a commercial motor vehicle inspection report and/or accident report is filled out, the correct motor carrier will receive credit (good or bad) for the inspection and/or accident. The Federal Motor Carrier Safety Administration and States use the inspection and/or accident reports in determining safety fitness ratings of motor carriers and targeting unsafe motor carriers for in-depth investigations. To avoid improperly identifying the name and address of a motor carrier, you should rely on **more than a single document or item when identifying the motor carrier**. You should review as many of the following items as possible to determine the name and address of the motor carrier.

- **SIDE OF THE VEHICLE** – The correct name, address and US DOT# of the motor carrier may or may not be marked on the side of the vehicle. If the marking on the side of the vehicle matches the name on the other items, you've probably identified the correct motor carrier.
- **DRIVER INTERVIEW** – Ask questions such as:
 - Is the vehicle leased or rented?
 - Who is the motor carrier that is responsible for this load?
 - Who is directing and controlling the movement of this vehicle?
 - Where is the motor carrier's principal place of business? (generally the corporate headquarters)
- **LEASE AGREEMENT** – This document is excellent for identifying the name of the lessee.
- **DRIVER'S LOG** – When logs are required, they will contain the name of the motor carrier and the city and state where the motor carrier's principal place of business is located.
- **BILLS OF LADING/SHIPPING PAPERS** – Generally this document will provide you with the name of the motor carrier who is responsible for the load. The bills of lading/shipping papers are the written transportation contract between the shipper and the carrier. They identify the freight, who is to receive it, and the place of delivery and give the terms of the agreement.
- **VEHICLE REGISTRATION** – These documents are good for identifying the owner and/or registrant who may or may not be the responsible motor carrier. Even when the registration identifies the responsible motor carrier, it may or may not show the address of the motor carrier's principal place of business because carriers with terminals in multiple states generally register their vehicles in the state of domicile. Therefore, the address may be a terminal address.

YOU CAN MAKE A DIFFERENCE!

All roadside inspection and accident reports are uploaded to SAFETYNET which monitors motor carriers' Out-of-Service and Accident rates. By properly identifying the motor carrier on this report, YOU will provide the important data needed to assist in the identification of high risk motor carriers.

- a) This data section shall not be left blank.
- b) Enter the unit number listed in Section 39-UNIT of the unit being described.

172) TOTAL LANES IN ROADWAY:

Total Lanes in Roadway
<input type="text"/>

- a) This data section shall not be left blank.
 - b) Enter "00" if
 - i) The unit listed in Section 171-UNIT was not traveling on a roadway before impact or
 - ii) Section 41-UNIT TYPE of the unit listed in Section 171-UNIT is "C" or "T".
- EXAMPLES:
 - A vehicle runs off a two lane highway striking a tree. In this example the correct entry is "02".
 - A collision occurs on private property. In this example the correct entry is "00".
 - A vehicle (U1) runs off a two lane highway striking a vehicle (U2) parked off roadway. In this example, the correct entry for (U1) is "02" and the correct entry for (U2) is "00".

- c) Enter the total number of lanes in the roadway on which the unit listed in Section 171-UNIT was traveling before impact.
 - i) For undivided highways/trafficways – total the “thru” lanes in both directions. Do not count designated turn lanes (left/right-turn only) or continuous turn lanes (center left-turn-only lane).
 - ii) For divided highways/trafficways – total number of “thru” lanes for the roadway on which the unit was traveling. Do not include on-ramps, off-ramps or acceleration/deceleration lanes in the total number of lanes.
 - iii) For off ramps -- count the total number of lanes on which the unit was traveling. Do not count designated turn lanes (left/right-turn only) or continuous turn lanes (center left-turn-only lane).
- d) For purposes of this data section, use the following definitions when considering whether the roadway/trafficway is divided or undivided and entering data for total number of lanes:
 - i) Roadway: That part of the trafficway designed, improved, and ordinarily used for motor vehicle travel... Separate roadways may be provided for northbound and southbound traffic (as well as eastbound and westbound). Bicycle paths and shoulders are not included...
 - ii) Median: An area of trafficway between parallel roads separating travel in opposite directions. A median should be four or more feet wide.
 - iii) Divided highway/trafficway: Roadway travel in the opposite directions that is physically separated by a median that is painted, raised, suppressed, etc. Excludes two-way continuous left turn lanes (center left-turn-only lane).
 - (1) If anything (paint, concrete, grass, etc, except center left-turn-only lane) that separates opposite lanes of traffic is four feet wide or larger, only count the number of “thru” lanes that go in the same direction of travel.
 - (2) If there is nothing that separates opposite lanes of traffic, or if the separation is less than four feet, then count the number of “thru” lanes in both directions.

213) COLLISION DIAGRAM:

- a) This data section shall not be left blank.
- b) The diagram section is intended to show a visual representation of the collision. Diagrams should be completed for all collision or incident investigations. A properly completed diagram should always mirror the events described in Section 221-REMARKS, *i.e.* the facts of the collision should be clearly understood by looking at the diagram or reading the officers remarks independently.
- c) When vehicles are moved prior to the officer's arrival, an investigation is still required. This makes it difficult to link physical evidence to the vehicles. You are encouraged to draw a diagram based on the investigation. This diagram should include the physical layout of the roadway and any physical evidence still at the scene. Include the probable position of the vehicles before, at and after impact as well as the probable path based on available evidence or statement(s). When a diagram is completed in this fashion, describe in Section 221-REMARKS, *i.e.* "Vehicles not observed in position after impact" or "Vehicles moved prior to arrival, diagram is estimated" or "Vehicles moved prior to arrival, unable to determine point/area of rest".
- d) Draw the position of the vehicle(s) before impact, at impact and at final rest. If the vehicle does not travel more than twenty (20) feet after first impact to final rest, a final rest drawing is not required.
- e) A diagram shall be created using a traffic type template or computer drawing program. Free-hand drawings are NOT acceptable. A photograph may NOT be used in lieu of a diagram. If a photograph is included in the report, it must be placed on the DIAGRAM SUPPLEMENTAL form. Scale diagrams are not necessary unless required by the reporting agency.
- f) A diagram drawn using a traffic template or generated by a computer and printed or copied onto the *Official Oklahoma Traffic Collision Report* (Section 213-COLLISION DIAGRAM or the DIAGRAM SUPPLEMENTAL form) is acceptable
- g) Number each unit with the same number listed in Section 39-UNIT.
- h) Any vehicle that did not contribute to the collision but is needed only for diagramming purposes should be labeled as "W". If a unit "W" is included in the diagram, explain in Section 221-REMARKS why it is included. Unit "W" information is not needed unless it is pertinent to give certain descriptions.
- i) Enter "NO DIAGRAM AVAILABLE" in the rare instance that a diagram is not generated and explain in Section 221-REMARKS.

- j) Enter "SUPPLEMENT DIAGRAM UTILIZED" in Section 213-COLLISION DIAGRAM if the DIAGRAM SUPPLEMENTAL form is used.

Describe the location where the specialized diagram may be found in Section 221-REMARKS.
- l) Indicate the direction and path of travel before contact with a solid line with arrowhead behind each vehicle. Use a dash line with arrowhead to show the course of travel after contact, continuing to the final position.
- m) If roll-over(s) occurred before impact, draw one solid loop where the roll-over(s) occurred and indicate the number of full and partial rolls in or near the loop. If roll-over(s) occurred after first impact draw one dash line loop where the roll-over(s) occurred and indicate the number of full and partial rolls in or near the loop. Describe roll-over(s) or partial roll-over(s) in Section 221-REMARKS.
- n) Label the width of the roadway and the width of the shoulder. The shoulder should be described. Examples: 10' Improved shoulder, 8 feet gravel shoulder, 12 ft. dirt shoulder, or no shoulder, etc.
- o) Draw and label traffic control devices, such as stop signs and yield signs in the diagram.
- p) Tire marks (including skid, yaw and scuffmarks) should be shown before impact and after impact, continuing until tire marks disappear or to final rest. Length of tire marks may be shown in diagram, but to keep from "cluttering" the diagram, they shall be described in the Section 221-REMARKS. If tire marks are shown in the diagram, they shall be labeled in Section 213-COLLISION DIAGRAM and described in Section 221-REMARKS.
- q) Non-vehicle type objects (pedestrians, cows, boards in road, etc,) must be shown in the diagram, but may be shown as a circle with an X in the middle. Always label non-vehicle type objects.
- r) Labeling lines/lanes of the roadway:
 - i) Label the geometrical center of a two-way road that does not have visible markings as "C/R".
 - ii) Label the center line of a road that separates traffic traveling in opposite directions as "C/L". (It need not be at the geometrical center of the road).
 - iii) Label the lane lines that separate lanes of traffic traveling in the same direction as "L/L".
 - iv) If a center median is in the diagram, it shall be labeled and the approximate width shall be shown.
- s) Fences, bridges, culverts, etc. must be drawn and labeled in the diagram if they were pertinent to the collision. See Figure 213-1 and Figure 213-2 for recommended report symbols.

- t) Draw an arrow to indicate the direction "North" in relation to the collision diagram. It is preferred that the top or right of the page be "North". The "Indicate North by Arrow" circle may or may not be used.
- u) Draw and label any view obstruction for any driver involved in the collision in Section 213-COLLISION DIAGRAM. An obstruction could be trees, embankment, building, sign, parked cars, etc.

Appendix D: Extended Definitions

Collision:

A collision is an unstabilized situation which includes at least one harmful event (ANSI D-16.1-Section 2.4.6, Edition 2007).

Contact vehicle:

A contact vehicle is any road vehicle which comes in contact with one or more road vehicles, non-motorists, or property in a collision. A contact vehicle is directly involved in a collision.

Deliberate intent:

Deliberate intent is the classification given to the cause of an event which occurs when a person acts deliberately to cause the event or deliberately refrains from prudent acts which would prevent occurrence of the event (ANSI D16.1 Section 2.4.2, Edition 2007).

Inclusions:

- ▶ Suicide
- ▶ Self-inflicted injury
- ▶ Homicide
- ▶ Injury or damage purposely inflicted
- ▶ And others

Exclusions:

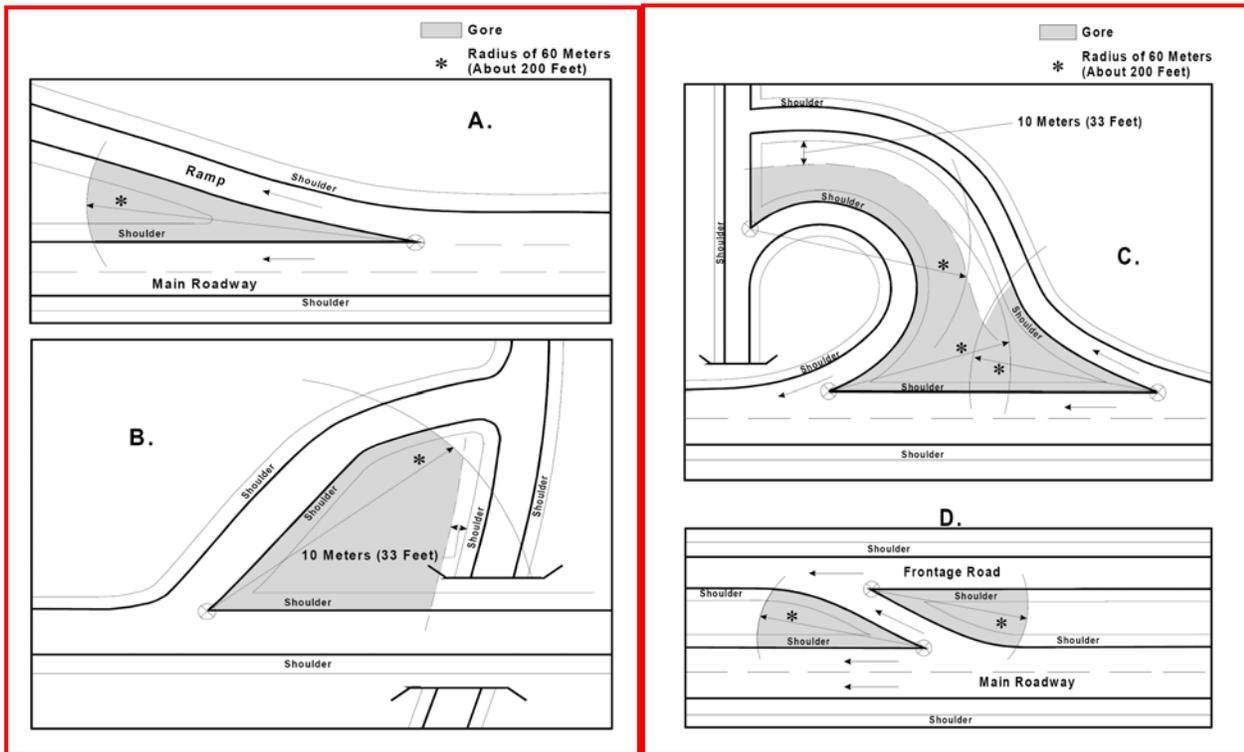

- ▶ Injury or damage beyond that which was intended
- ▶ And others

Examples:

- 1) When a driver intentionally kills or injures himself with a motor vehicle, by driving it against a fixed object or into a body of water, for example, the driver's death or injury is a result of deliberate intent.
- 2) When a driver intentionally kills or injures another person with a motor vehicle, by running into a pedestrian, for example, the death or injury is a result of deliberate intent.
- 3) When a driver intentionally causes damage with a motor vehicle, by ramming another vehicle, for example, the damage is a result of deliberate intent.

Gore

A gore is an area of land where two roadways diverge or converge. The area is bounded on two sides by the edges of the roadways, which join at the point of divergence or convergence. The direction of traffic must be the same on both sides of these roadways. The area includes shoulders or marked pavement, if any, between the roadways. The third side is 60 meters (approximately 200 feet) from the point of divergence or convergence or, if any other road is within 70 meters (230 feet) of that point, a line 10 meters (33 feet) from the nearest edge of such road (ANSI-D16.1 Section 2.5.19, Edition 2007).

Appendix D-1 (ANSI D16.1 Section 2.5.19)

Harmful event:

A harmful event is an occurrence of injury or damage (ANSI D16.1 Section 2.4.1, Edition 2007).

Inclusions:

An incident can be an injury or damage resulting when a driver dies, loses consciousness or control of the vehicle because of a medical condition such as a stroke, heart attack, diabetic coma, epileptic seizure, etc. In such case the immediate effect of the disease, such as the driver's death, loss of consciousness or control is not itself considered to be a harmful event.

Interstate Commerce:

Trade, traffic or transportation in the United States

Between a place in a State and a place outside of such State (including a place outside of the U.S.)

Between two places in a State through another State or a place outside of the U.S.

Between two places in a State as part of trade, traffic or transportation originating or terminating outside the State or the U.S.

Required to have a USDOT number.

Intrastate Commerce:

Used for a carrier that operates entirely within the state

Not required to have USDOT number

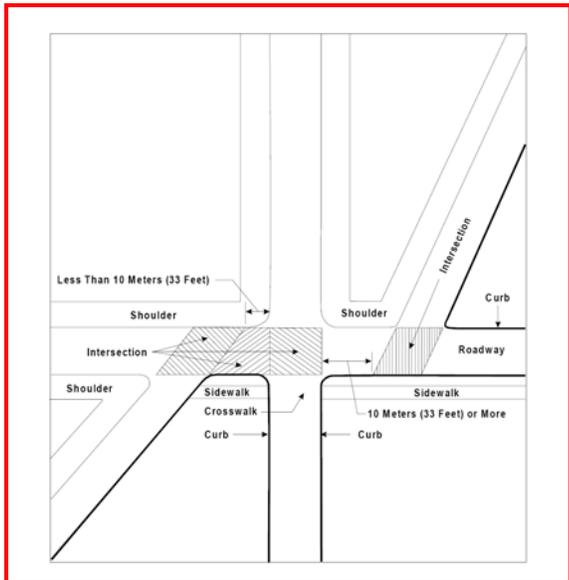

USDOT numbers in the process of being assigned to intrastate motor carriers in a number of states

Should include state two-character abbreviation on the end (Example: USDOT 123456XX)

Intersection

An intersection is an area which (1) contains a crossing or connection of two or more roadways not classified as driveway access and (2) is embraced within the prolongation of the lateral curb lines or, if none, the lateral boundary lines of the roadways. This does not include a collision which occurs beneath an overpass or above an underpass.

Where the distance along multiple roadways between two areas meeting these criteria are less than 10 meters (33 feet), the two areas and the roadways connecting them are considered to be parts of a single intersection (ANSI D16.1 Section 2.5.10, 2007 Edition).

Legal intervention:

Legal intervention is a category of deliberate intent in which the person who acts or refrains from acting is a law-enforcing agent or other official (ANSI D16.1 Section 2.4.3, 2007 Edition).

Examples:

- 1) If a lawbreaker crashes either intentionally or unintentionally into a road block set up by police to stop him, the crash is considered a result of legal intervention. If a driver other than the lawbreaker crashes into the road block, the crash is not considered to be a result of legal intervention.
- 2) If a police car is intentionally driven into another vehicle with the intent of ending the pursuit, the result is considered to be a legal intervention. If a lawbreaker being pursued by the police loses control of his vehicle and crashes, the result is not considered to result be a legal intervention.
- 3) If during the course of the pursuit, the police vehicle strikes a road vehicle other than the subject of the pursuit, a non-motorist, or property, then that harmful event is not a legal intervention.

Median

A median is an area of a trafficway between parallel roads separating travel in opposite directions (see Figure 1). A median should be four or more feet wide (ANSI D16.1 Section 2.2.29, 2007 Edition).

Inclusions:

- ▶ Physical barriers separating roads with travel in opposite directions.
- ▶ Depressed, raised or flush areas between roads with travel in opposite directions.
- ▶ Painted medians of four or more feet between roads with travel in opposite directions, including continuous left-turn lanes.

Exclusions:

- ▶ Shoulders, separators

Motor Vehicle in Transport

A motor vehicle is any motorized (mechanically or electrically powered) road vehicle not operation on rails (ANSI D16-1996, 2.2.7). The term "in transport" denotes the state or condition of a transport vehicle which is in motion or within the portion of a transport way ordinarily used by similar transport vehicles. When applied to motor vehicles, "in transport" means in motion or on a roadway (ANSI D16-1996, 2.2.34, 2007 Edition).

Not In Commerce - Government

Any government vehicle whether operated by local, state or federal government. In most circumstances, a government vehicle will not have a USDOT number.

Not in Commerce - Other Trucks

Used for personal rental vehicles (U-Haul, Penske, etc.) over 10,000 pounds GVWR/GCWR operated by a private individual.

Positive Median Barrier:

A positive median barrier is a temporary or permanent vertical structure designed to prevent vehicles from entering the opposing traffic stream, either accidentally or intentionally. Positive median barriers may also be used to reduce the glare produced by oncoming vehicle headlights.

Railway Collision:

A railway collision is a transport collision that (1) involves a railway train in transport and (2) is not an aircraft collision, watercraft collision, or motor vehicle collision (ANSI D16.1 Section 2.4.13, 2007 Edition).

Roundabout:

A roundabout is a circular traffic pattern in which yield control is used on all entries, circulating vehicles have the right-of-way, pedestrian access is allowed only across the legs of the roundabout behind the yield line and circulation is counter-clockwise and passes to the right of the central island.

Sag

Sag is the bottom of the hill.

Special Mobilized Machine:

Special purpose machines, either self-propelled or drawn as trailers or semitrailers, which derive no revenue from the transportation of persons or property, whose use of the highway is only incidental, and whose useful revenue producing service is performed at destinations in an area away from the traveled surface of an established open highway (Source Title 47 1102.23).

Traffic Circle:

A traffic circle is an intersection of roads where motor vehicles must travel around a circle to continue on the same road or leave on any intersecting road.

Working Motor Vehicle

A working motor vehicle is a motor vehicle in the act of performing construction, maintenance or utility work related to the trafficway. This "work" may be located within open or closed portions of the trafficway and motor vehicles performing these activities can be within or outside of the trafficway boundaries (ANSI D16.1, Section 2.2.7.2).

Inclusions:

- ▶ Vehicle at work in a marked work zone
- ▶ Vehicle at work on the median, shoulder or roadside.
- ▶ Mobile maintenance convoy
- ▶ A law enforcement vehicle which is participating strictly in a stationary construction or mobile maintenance activity as a traffic slowing, control, signaling or calming influence

Examples:

- 1) Asphalt roller working in a highway construction zone
- 2) State highway maintenance crew mowing grass on roadside
- 3) Utility truck performing maintenance on the power lines along the roadway
- 4) A private excavating company contracted by the state digging the foundation for a new overpass

Exclusions:

- ▶ Vehicle performing a private construction/maintenance activity
- ▶ Law enforcement vehicle performing other work activities, such as traffic stops, accident investigation, patrolling and traffic control, which is not related to construction, maintenance or utility work on the trafficway
- ▶ Vehicle performing a work activity other than highway construction, maintenance or utility work
- ▶ Construction, maintenance, utility vehicle while moving from one job site to another

Examples:

- 1) An excavation company digging a foundation for a new building
- 2) Garbage truck, delivery truck, taxi, emergency vehicle or tow truck, etc.

Work Zone

A Work Zone is a segment of road that is currently being worked on for repairs or improvements. A "workspace" – a portion of the road (lanes, shoulder, etc.) is closed with repair workers and/or equipment present. Here are the relevant sections of a work zone:

Before the first Work Zone Warning Sign

This is the section of highway where road users have not yet entered the upcoming work zone or incident area. A collision that occurs before or after the Work Zone warning area or after the Termination Area may be counted as a Work Zone collision if traffic is congested before or after these areas.

Advance Warning Area

The advance warning area is the section of highway where road users are informed about the upcoming work zone or incident area. The advance warning area may vary from a single sign or high-intensity rotating, flashing, oscillating, or strobe lights on a vehicle to a series of signs in advance of the temporary traffic control (TTC) zone activity area (Source: Manual on Uniform Traffic Control Devices, Section 6C.04, 2009 Edition).

Transition Area

The transition area is that section of highway where road users are redirected out of their normal path (Source: Manual on Uniform Traffic Control Devices, Section 6C.05, 2009 Edition).

Activity Area

The activity area is the section of the highway where the work activity takes place. It is comprised of the workspace, the traffic space, and the buffer space. The workspace is that portion of the highway closed to road users and set aside for workers, equipment, and material, and a shadow vehicle if one is used upstream (Source: Manual on Uniform Traffic Control Devices, Section 6C.06, 2009 Edition).

Workspaces are usually delineated for road users by channelizing devices or, to exclude vehicles and pedestrians, by temporary barriers. The workspace may be stationary or may move as work progresses (Source: Manual on Uniform Traffic Control Devices, Section 6C.06, 2009 Edition).

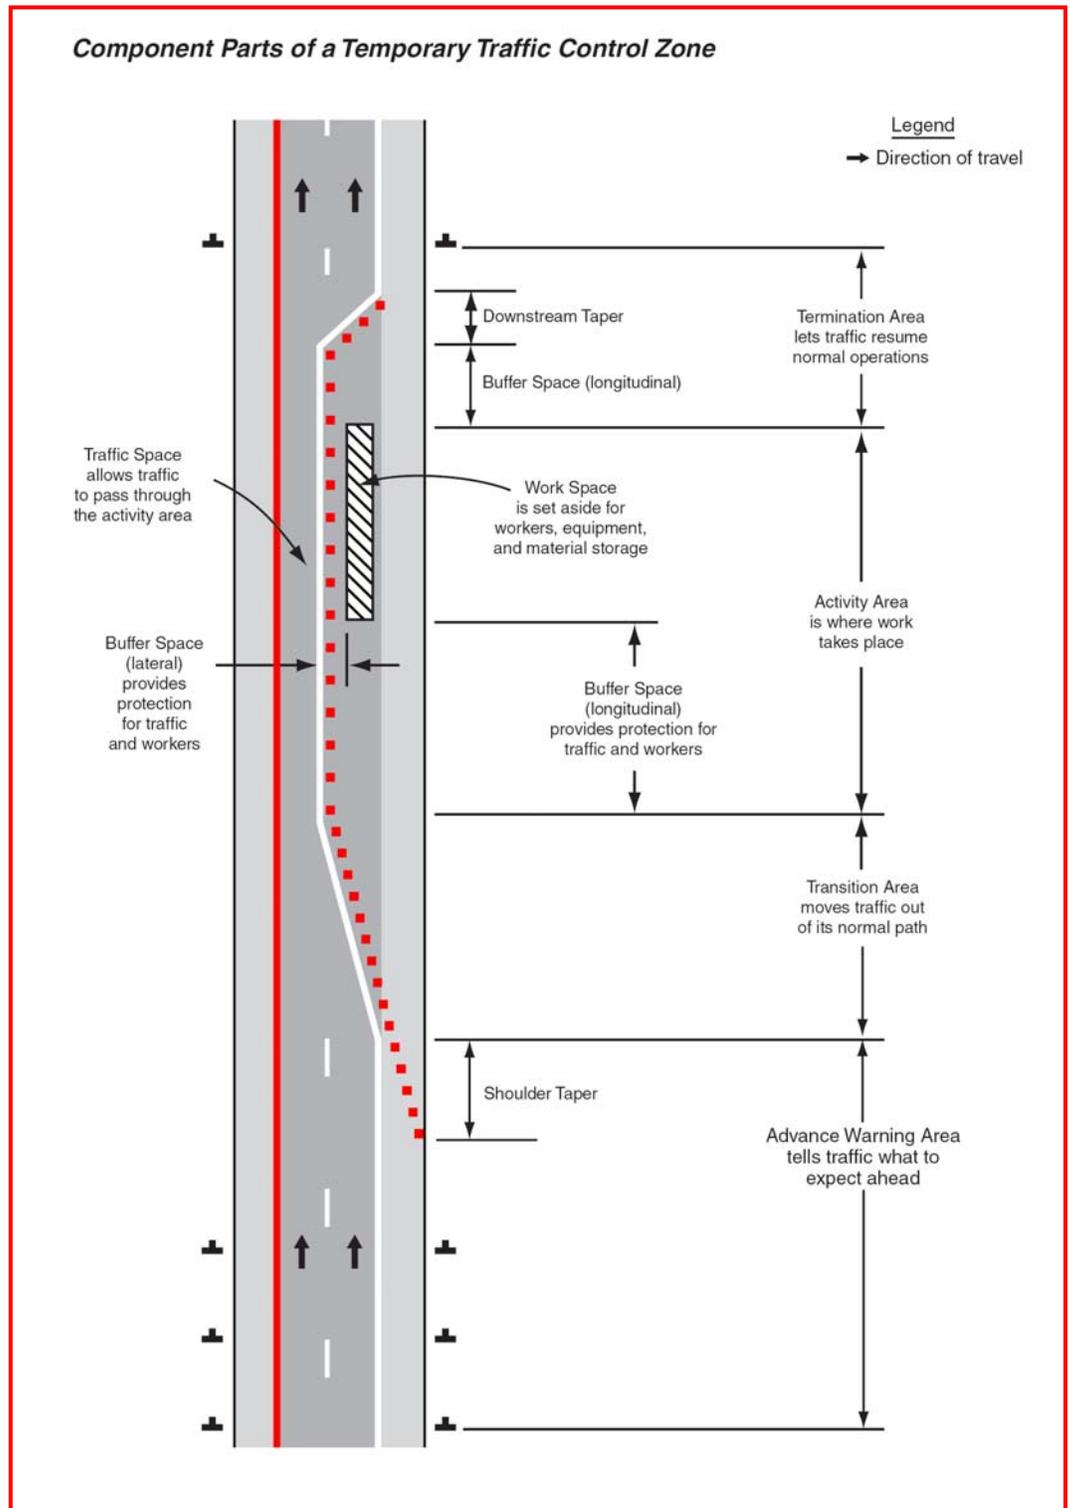

The traffic space is the portion of the highway in which road users are routed through the activity area (Source: Manual on Uniform Traffic Control Devices, Section 6C.06, 2009 Edition).

The buffer space is a lateral and/or longitudinal area that separates road user flow from the workspace or an unsafe area, and might provide some recovery space for an errant vehicle (Source: Manual on Uniform Traffic Control Devices, Section 6C.06, 2009 Edition).

Termination Area

The termination area shall be used to return road users to their normal path. The termination area shall extend from the downstream end of the work area to the last TTC device such as END ROAD WORK signs, if posted. An END ROAD WORK sign, a Speed Limit sign, or other signs

may be used to inform road users that they can resume normal operations. A longitudinal buffer space may be used between the workspace and the beginning of the downstream taper (Source: Manual on Uniform Traffic Control Devices, Section 6C.07, 2009 Edition).

Appendix L: Sequence of Events

Non-Collision Attributes:

Ran-off-road	Used when a driver loses control of the vehicle and leaves the roadway.
Jackknife	Applies to a condition that occurs to an articulated vehicle (any vehicle with a trailing unit(s) connected by a "hitch"; while in motion. The condition reflects a loss of control of the vehicle by the driver in which the trailer(s) yaws from its normal straight-line path behind the power unit.
Overturn	Used when a vehicle rotates 90° or more, side-to-side or end-to-end. Also may be referred to as a "Rollover". An Overturn or Rollover should be treated as a single event when a vehicle performs multiple rotations in a crash.
Downhill Run-Away	Refers to a vehicle that loses control due to brake failure on a downhill grade.
Cargo Loss or Shift	Refers specifically to the loss or shift of items carried on or in a motor vehicle or its trailing unit, and not to the vehicle or trailing unit, itself. As an event in the sequence for this vehicle, the loss or shift does not have to be harmful. For example, tractor trailer rounds a sharp curve, causing cargo in its trailer to shift precipitating an overturn.
Explosion or Fire	May occur as the cause or the result of the collision.
Separation of Units	Used when a trailing unit separates from its power unit or another trailing unit(s).
Cross Median/Centerline	Used when a vehicle completely crosses the median and enters the shoulder or travel lanes on the opposite side of a divided highway. It also includes crossing over the centerline of a two-way undivided highway.
Equipment Failure	Examples include defective: tires/wheels/rims, brakes, steering, suspension, power train, lighting systems, trailer hitch, air bag, wipers, etc.
Other Non-Collision	Includes events such as: vehicle went airborne (driving off a cliff), injured in vehicle (load passes through rear window), gas inhalation (carbon monoxide), fell from vehicle, or thrown or falling object (falling tree/rock).

Collision Involving/With Attributes:

Pedestrian	A person traveling on their feet. This also includes persons on personal conveyances. A personal conveyance is: (1) a human-powered, non-motorized device not propelled by pedaling, (2) such devices even when motorized. Examples include; skateboard riders, people in wheelchairs, roller skates, motorized scooters, etc.
Motor Vehicle In-transport	Use this code when one motor vehicle collides with another motor vehicle in motion (In-Transport). Inclusions: motor vehicle in traffic on a highway, driverless motor vehicle in motion, motionless motor vehicle abandoned on a roadway, disabled motor vehicle on a roadway, etc. In roadway lanes used for travel during rush hours and parking during off peak periods, a parked motor vehicle is "in-transport" during periods when parking is forbidden.
Parked Motor Vehicle	Refers to the collision of a motor vehicle in-transport with a motor vehicle not in-transport. Parked motor vehicles include vehicles parked outside the roadway and those parked in the roadway in lanes not designated for travel at the time of accident.
Train	Used when qualifying vehicle strikes a train.

Collision Involving/With Attributes:

Pedalcycle	Includes persons riding non-motorized bicycles, tricycles or unicycles. Also includes passengers on those devices.
Animal	Used for collisions with live animals (domesticated or wild) that are not themselves being used as transportation or to draw a wagon, cart or other transport device.
Fixed Object	Refers to permanent or semi-permanent structures such as boulders, impact attenuators, bridges, concrete traffic barriers, embankments, or culverts, etc.
Work Zone/ Maintenance Equipment	Use this code when this motor vehicle strikes a construction, maintenance or utility vehicle in the process of working and not "in-transport." Example: a "cherry picker" working on telephone lines.
Other Movable Object	Refers to temporary or not-fixed objects such as ridden animals or animals drawing a device, construction barrels, temporary highway signs, or animal carcasses and fallen trees in the roadway.

Appendix M: Additional Instructions for Commercial Vehicle Data

A set of CMV visor cards was issued with each instruction manual for the new collision report form that became effective January 1, 2007. Federal Motor Carrier Safety Association of the U.S. Department of Transportation provided the sets of cards. Each set consists of five cards: one blue, one yellow, one green, one red, and one orange. The "blue card" is in conflict with the design and data collection of the new collision report form. **Please destroy the "blue card"**. You may continue to use the other cards as reference.

Page two of the collision report form contains the following wording where the commercial vehicle data is to be completed:

Complete information below if this vehicle is being used for COMMERCE/BUSINESS and has a GVWR/GCWR IN EXCESS OF 10,000 LBS., or has a HAZMAT PLACARD, or is a BUS WITH SEATING FOR NINE OR MORE INCLUDING THE DRIVER.

This criterion is for the collision report only and does not necessarily represent an interstate or intrastate regulated motor vehicle.

Section 162-VEHICLE USE must be completed when the commercial vehicle section is used. Definitions of the four choices are:

a) Interstate Commerce

1. Trade, traffic or transportation in the United States
2. Between a place in a State and a place outside of such State (including a place outside of the U.S.)
3. Between two places in a State as part of trade, traffic or transportation originating or terminating outside the State of the U.S.
4. Required to have a USDOT number

b) Intrastate Commerce

1. Used for a carrier that operates solely within the state
2. May or may not have a USDOT number
3. Should include state two-character abbreviation on the end (Example: USDOT 123456OK)

c) Other Non-commercial

1. Used for personal rental vehicles (U-Haul, Penske, etc.) over 10,000 pounds GVWR/GCWR operated by a private individual

d) Government

1. Any government vehicle whether operated by local, state or federal government over 10,000 pounds GVWR/GCWR.
2. In most circumstances, will not have a USDOT number

If you have any questions, please contact OHP Troop S at 405/702-0813 or Kathy Evans at 405/523-1576.

How to Find the Responsible Carrier and Correct U.S. DOT Number

SIDE OF THE VEHICLE

In most cases, this is good for name and number. Look for a number preceded by the letters: USDOT.

DON'T STOP

...keep on looking...

The information on the side of the truck may not be the U.S. DOT number, name, or address of the responsible motor carrier.

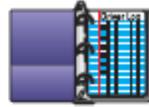

DRIVER INTERVIEW

1. Is the vehicle leased or rented?
2. Who is the motor carrier responsible for this load?
3. Who is directing and controlling the movement of this vehicle?
4. Where is the motor carrier's principal place of business?

LEASE AGREEMENT

identifies the name of the lessee and their U.S. DOT number.

DRIVER'S LOG

contains the name of the motor carrier and the city and State for the carrier's principal place of business.

SHIPPING PAPERS

provide the name of the motor carrier responsible for the load, but not the carrier's U.S. DOT number.

NOTE: VEHICLE REGISTRATION

Generally good for identifying owner or registrant.
CAREFUL: This may not be the responsible carrier!

FMCSA WEB SITE: <http://safer.fmcsa.dot.gov/CompanySnapshot.aspx> is an excellent source for verifying a motor carrier's U.S. DOT number, legal name, "doing business as" name, physical address, and phone number.

How to Find the Responsible Carrier and Correct U.S. DOT Number

EXAMPLE 1: John Smith owns his own truck tractor, operating under John Smith Trucking. He contracts with White Manufacturing to take one of its trailers loaded with its goods from New York to Los Angeles.

Who is the Motor Carrier:

- A. John Smith?
- B. White Manufacturing?

John Smith is the motor carrier, because he is the entity that has agreed to carry this particular load.

EXAMPLE 2: John Smith, driving his truck tractor, utilizes a cargo broker, K&S Trucking, to obtain goods from Intermodal Inc. shipping company for his return trip back to New York.

Who is the Motor Carrier:

- A. John Smith?
- B. K&S Trucking?
- C. Intermodal Inc.?

John Smith is the motor carrier, because K&S transferred the responsibility of the load to John Smith.

EXAMPLE 3: John Smith, driving his truck tractor, leases his services to Polyester Chemical Company. Polyester directs Smith to deliver a semi-trailer from New York to St. Louis.

Who is the Motor Carrier:

- A. John Smith?
- B. Polyester?

The lease agreement between Polyester and Mr. Smith makes Polyester the motor carrier responsible for the load.

EXAMPLE 4: John Smith is driving a tractor/semi-trailer owned and operated by ABC Trucking.

Who is the Motor Carrier:

- A. John Smith?
- B. ABC Trucking?

ABC Trucking is the motor carrier. John Smith is just a driver for ABC Trucking.

EXAMPLE 5: John Smith is driving a tractor owned by ABC Trucking, which has been leased to XYZ Trucking. XYZ uses the tractor to pull XYZ trailers in its regular shipping service.

Who is the Motor Carrier:

- A. John Smith?
- B. ABC Trucking?
- C. XYZ Trucking?

In this case XYZ is the motor carrier, because XYZ is directing the carrying of the load.

Reporting Hazardous Materials Information

ACCURATE REPORTING SAVES LIVES

Data you collect is used to calculate risk assessment, determine response methods, and develop regulations. Vehicles carrying hazardous materials are required to carry shipping papers containing the HM Class and ID number (or name). Your Accident or Collision Report/Supplement may ask the following hazardous materials questions (exact wording will vary by State):

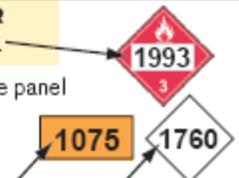

1. DOES THE VEHICLE HAVE A HAZARDOUS MATERIALS PLACARD? YES NO

Placards should be on all four sides of the vehicle. For containers with bulk packages inside, if the required ID# marking is not visible, the transport vehicle must be marked on each side and each end.

2. ENTER THE FOUR-DIGIT NUMBER (OR NAME) FROM THE PLACARD 1 9 9 3

The four-digit number may be on an orange panel or a white "square-on-point" panel. If no four-digit number appears on the placard, enter the Placard Name.

3. ENTER THE HAZARDOUS MATERIALS CLASS NUMBER FROM THE BOTTOM OF THE PLACARD 3

The Class Number can be a one- or two-digit number with a decimal in the middle. 5.1 It is critical for identifying and studying various types of hazardous materials involved in traffic crashes.

4. WAS HAZARDOUS CARGO RELEASED? YES NO

The intent of this question is to determine whether any of the **placarded material** was released or escaped from its transport container into the environment. Fuel or oil carried by the vehicle for its own use is NOT considered cargo and should not be reported in this section.
