Facility Reopening Package and CMS Visitation Considerations

June 24, 2020

Model Reporting Package for Long Term Care Facilities

This packet has been developed to simplify and combine all information required to be provided to OSDH to meet the requirements specified in Oklahoma's [*Phased Reopening in Long-Term Care Facilities*](#) under Infection Preventionist, which applies to all provider types. The packet includes [Risk Assessment template](#), [Executive Order 2020-20](#), and [Reporting Package for Phased Reopening of LTC Facilities](#).

Submittal of this material is not required prior to facilities implementing their reopening plans.

You will receive an email approving your infection preventionist, the risk assessment and monitoring plan. This approval is required for any Oklahoma LTC CARES Grant award. More information on the grant application process will be coming soon.

If you have already submitted portions of this material, please send any remaining required documents.

Visitation Guidance

CMS released this [FAQ on visitation in nursing homes](#) yesterday. It discusses visitation, communal activities, ombudsman access and discharge notification. Other provider types may find the guidance on visitation and communal dining useful. This document discusses strategies for outdoor visitation.
