If a parent reports that their child had chickenpox disease, the child is not required to receive varicella vaccine. Record that the child had the disease.

For doses given on or after Jan. 1, 2003, the 5th dose of DTaP must be given on or after the 4th birthday (or within 4 days before the 4th birthday). This rule.

The first doses of measles, mumps and rubella (MMR), varicella, and hepatitis A vaccines must be administered on or after the child's first birthday (or within 4 days before the birthday) or they must be repeated.

Doses administered 4 days or less, before the minimum intervals or ages, are counted as valid doses.

The first doses of measles, mumps and rubella (MMR), varicella, and hepatitis A vaccines must be administered on or after the child's first birthday (or within 4 days before the birthday) or they must be repeated.

For doses given on or after Jan. 1, 2003, the 5th dose of DTaP must be given on or after the 4th birthday (or within 4 days before the 4th birthday). This rule does not apply to doses given before 2003.

If a parent reports that their child had chickenpox disease, the child is not required to receive varicella vaccine. Record that the child had the disease.

It is not necessary to restart the series of any vaccine if a dose was given late or if a dose is past due. Longer than recommended intervals between doses do not affect final immunity.

Children may be allowed to attend childcare and school if they have received at least one dose of all the required vaccines due for their age or grade and the next doses are not yet due, but they must complete the remaining doses of vaccine on schedule. These children are “in the process” of receiving immunizations.
