Rate of Preventable Hospitalizations per 100,000 population, 2008

State: 2120.9 rate per 100,000 population
US: 1762.6 rate per 100,000 population

Note: Rates of preventable hospitalizations were calculated using procedures developed by the Agency for Healthcare Research and Quality (AHRQ). The Healthcare Cost and Utilization Project (HCUP) creates a Nationwide Inpatient Sample (NIS), which is the largest all-payer inpatient care database in the country. In 2008, the NIS consisted of approximately 8 million records from 1,056 hospitals located in 42 states. HCUP publicly releases the data as a national estimate, but not on a state-by-state basis. National comparison/ranking data is not available, so unfortunately grades could not be calculated.

Data Source: Hospital Discharge Data
