PUBLIC HEALTH STATISTICS OF OKLAHOMA

BIRTHS AND DEATHS

1971

This publication contains data relating to births, deaths, stillbirths, marriages, and divorces for Oklahoma for the calendar year 1971, as well as for earlier years. Information for 1971 is shown in the thirteen tables in the appendix, the first of which is an historical table giving information for the years 1941-1971. The narrative portion of this bulletin points out the most commonly used statistics.

POPULATION

The Oklahoma Employment Security Commission's population estimates for July 1, 1971, were used for calculating rates.[1]

RESIDENCE ALLOCATION

Except for Tables II and XIII in the appendix, information in this publication relates to the resident population regardless of the place of occurrence of the event. Birth, death, and stillbirth certificates are filed in the states in which the events occur. However, copies are returned to the state of residence for statistical purposes. No such exchange is made for marriage and divorce information. A similiar reallocation is made to give only information on residents of the individual counties and cities within the state.

CAUSE OF DEATH CLASSIFICATION

The Eighth Revision of the International Classification of Disease Adapted for Use in the United States along with special rules and decision tables were used in selecting the underlying

[1]For more information write Oklahoma Employment Security Commission; Research and Planning Division; Oklahoma City, Oklahoma 73105

cause of death. This Revision was used for the first time in 1968. From 1958 through 1967 the Seventh Revision was used. In changing from the Seventh to the Eighth Revision, categories and rules for selection were changed in such a way to make it necessary to give a comparability ratio for use in comparing data classified under the different revisions. Table 3 shows those categories with a change of 2% or greater from the previous revision.

Table 3

Comparability Ratio of Categories Showing Significant Change Due to 8th Revision

38 cmsr

Cause of Death	Provisional Comparability Ratio*
Enteritis & other diarrhoeal disease	44.7
Tuberculosis of the respiratory system	97.1
Syphilis and its sequelae	39.1
Benign and unspecified neoplasms	102.2
Meningitis	90.9
Chronic rheumatic heart disease	104.8
Hypertensive disease	64.2
Other forms of heart disease	108.5
Appendicitis	105.9
Intestinal obstruction & hernia	74.8
Cirrhosis of the liver	102.2
Nephritis & nephrosis	80.0
Hyperplasia of prostate	96.2
Birth injury, difficult labor, other anoxic and hypoxic conditions	178.1
Other causes of perinatal morbidity	57.1
All other accidents	93.3
Suicide & self-inflicted injury	95.6
All other external causes	142.1

*Ratio of deaths coded to a specific category by the 8th Revision to the deaths coded to this category by the Seventh Revision expressed by a %.

Chart 1

Crude Birth and Death Rates,
Oklahoma, 1934 - 1971

LIVE BIRTHS

An ever increasing per cent of births are delivered by a physician in a hospital, indicating that each newborn is receiving better care. However, as seen in Table 4, 362 births did not occur in a hospital, 126 of which were not delivered by a physician.

Table 4

Live Birth Attendance by Race, Oklahoma, 1971

Attendance	Total		White		Negro		Indian	
	No.	%	No.	%	No.	%	No.	%
Total	45,353	100.0	37,517	100.0	4,436	100.0	3,400	100.0
Physician in Hospital	45,091	99.4	37,301	99.4	4,404	99.3	3,386	99.6

Mothers 25 to 29 years of age delivered the lowest per cent of immature births. Negro births contributed a much higher per cent immaturity than either white or Indian. Table 6 shows further details of immature births.

Table 6

Number of Live Births and Number and Percentage Immature by Race, by Age of Mother, Oklahoma, 1971

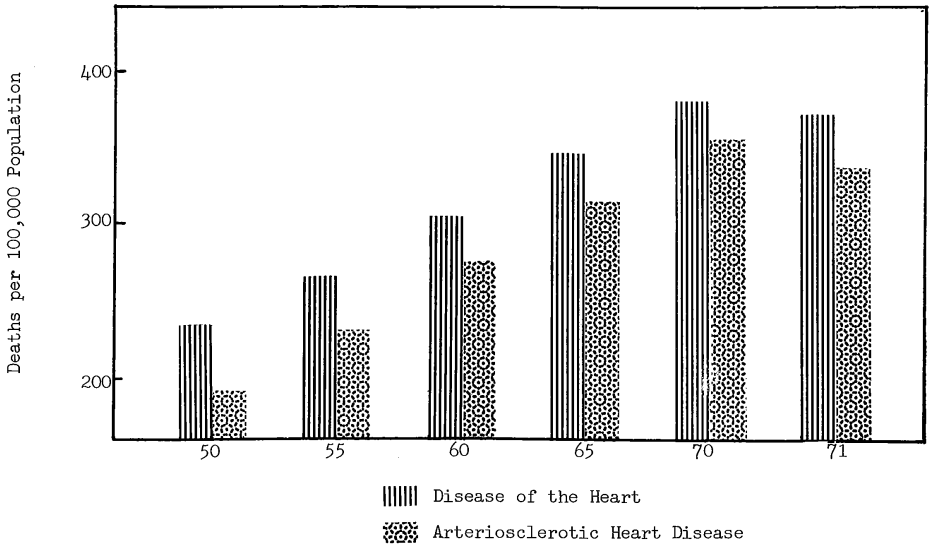
LEADING CAUSES OF DEATH

As in past years, the leading causes of death in Oklahoma remain 1) heart disease, 2) malignant neoplasms, 3) cerebrovascular disease, and 4) accidents. Further detail on leading causes of death as well as information for each age group is given in Table VII in the appendix.

Chart 3 shows that the increase in heart disease deaths is mainly due to arteriosclerotic heart disease.

Chart 3

Death Rates of Disease of the Heart and Arteriosclerotic Heart Disease
Oklahoma, 1950 - 1971



Within the classification of malignant neoplasms, malignant neoplasms of the trachea, bronchus, and lung accounted for most deaths. Table 10 gives further detail for other specific sites.

Table 10

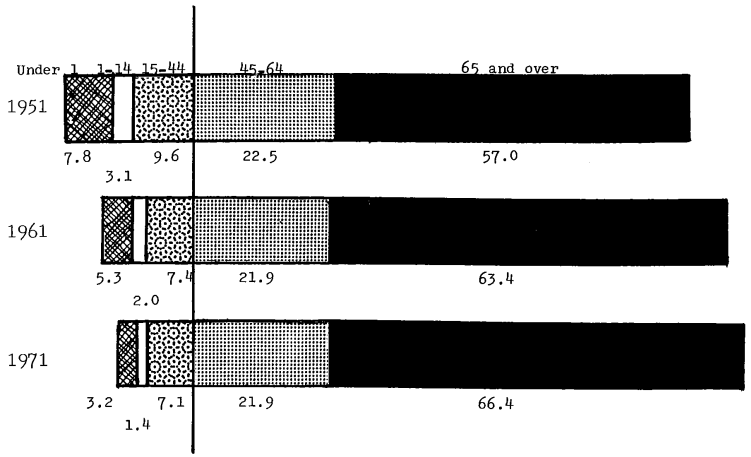
Lymphosarcoma and Other Neoplasms of Lymphatic and Hematopoietic Tissues	141	110

AGE OF PERSONS AT DEATH

Chart 4 shows the trend of decreasing deaths among the younger age groups. Tables VII, VIII, XI, and XII in the appendix give further information on deaths for specific age groups.

Chart 4

Percentage Distribution of Deaths, by Age,
Oklahoma, 1951, 1961, 1971



COMMUNICABLE DISEASES

Communicable diseases have continued to play a smaller role as a cause of death, while chronic diseases have accounted for an ever increasing number of deaths. Chart 5 shows the trend from 1935 to 1971.

MATERNAL DEATHS

The number of maternal deaths in Oklahoma during 1971 was 9. However, with such a small number, trends may not be indicated. Therefore, the five year total of 1967-1971 (60), was used to give a more realistic trend indicator in Tables 11 and 12.

APPENDIX

BIRTHS AND DEATHS
1971

Symbols Used in Tables

\- Number or rate is zero
... Item not applicable
0.0 Rate is more than 0 but less than 0.05
---- Data not available

Birth & death rates represent number per 1,000 population
Rates of specific causes represent number per 100,000 population
Infant & neonatal death rates & stillbirth rates represent number per 1,000 live births
Maternal deaths represent number per 10,000 live births

TABLE 1. BIRTHS, DEATHS, and DEATHS BY IMPORTANT CAUSES, NUMBER and RATE, OKLAHOMA, 1941-1971
Figures in Parentheses Refer to Fifth Revision of International List of Causes of Death
