ESSENTIALS FOR HEALTHY HOMES PRACTITIONER COURSE
December 17th-18th 2012

This free training is a unique opportunity to learn to identify home improvement and building techniques that can promote safe and sanitary housing as a means of preventing disease and injury. In particular, the training covers such issues as indoor moisture, dust and pest allergens, injury prevention and contaminant sources.

Many children suffer from asthma. Excess moisture, poor air quality and pest infestations in housing have been linked to asthma and other respiratory conditions; and emerging scientific evidence links asthma, lead poisoning and unintentional injuries to substandard housing.

A unique feature of the course is the opportunity for housing and health professionals to better collaborate in solving these healthy homes problems. Additional information about the course can be obtained by visiting the National Center for Healthy Housing website at <http://www.nchh.org/Training/HealthyHomesTrainingCenter/TrainingCourses/Essentials.aspx>

Participants will learn how to:

- Identify key health issues related to housing,
- Reduce moisture, dust allergens, and contaminant sources within the home,
- Prevent common household injuries,
- Work with families and communities to implement and maintain changes, and
- Stay current with the latest research on healthy housing issues.

This training is being offered free of charge!
