Grades 6-8

- Half of middle school students who currently smoke think young people who smoke cigarettes have more friends. In comparison, 17.4% of middle school students who have never smoked think this.
- About five times as many middle school students who currently smoke think smoking cigarettes makes young people look cool or fit in (26.5%) compared to middle school students who have never smoked (5.2%).
- Among current smokers, females are much more likely to think that breathing smoke from other people’s cigarettes or other tobacco product is harmful to them (88.8% of females compared to 45.7% of males).
- Among those who have never smoked, 96.6% of females think breathing smoke from other people’s cigarettes or other tobacco product is harmful to them, as compared to 94.1% of males.
- 89.3% agree or strongly agree with the statement: ‘All tobacco products are dangerous.’ Only 10.6% disagree or strongly disagree.

Grades 9-12*

- Approximately 30% of high school students who currently smoke think that young people who smoke cigarettes have more friends. In comparison, 14.5% of high school students who have never smoked think this.
- About four times as many high school students who currently smoke think smoking cigarettes makes young people look cool or fit in (19.5%) compared to high school students who have never smoked (4.7%).
- Among current smokers, females are more likely to think that breathing smoke from other people’s cigarettes or other tobacco product is harmful to them (92% of females compared to 80.2% of males).
- Among those who have never smoked, 98.2% of females think breathing smoke from other people’s cigarettes or other tobacco product is harmful to them, as compared to 94.3% of males.
- 85.9% agree or strongly agree with the statement: ‘All tobacco products are dangerous.’ Only 14.1% disagree or strongly disagree.

*Unweighted data is presented for high schools
“Current use” was defined as use of the product at least once within the last 30 days. “Ever use” was defined as use on at least one occasion.

**Grades 6-8**

- Electronic cigarettes are currently being used by 2.6% of Oklahoma middle school students (females: 2.3%, males: 2.8%). Nationwide, electronic cigarettes are currently being used by 1.1% of middle school students (females: 0.9%, males: 1.4%).
- Ever use of electronic cigarettes is more common. Among Oklahoma middle school students, 6.4% have ever used electronic cigarettes (females: 6.0%, males: 6.7%). Nationwide, 3% have ever used electronic cigarettes (females: 2.8%, males: 3.1%).
- Current hookah use is reported by just 0.9% of Oklahoma middle school students (females: 0.8%, males: 1.0%). This compares to 1.1% in the nation (females: 1.3%, males: 0.9%).
- Snus is currently used by 1.8% of middle school students (females: 1.6%, males: 2.0%). In the nation, it is used by 0.4% (females: no data, males: 0.7%).

**Grades 9-12**

- Electronic cigarettes are currently being used by 7.9% of Oklahoma high school students. In the nation as a whole, 4.5% of high school students currently use electronic cigarettes. Usage among male students is greater than among female students (see graph on right side below).
- Among high school students, 18.1% reported that they have ever used electronic cigarettes (females: 14.8%, males: 21.1%). Nationally, 11.9% have ever tried electronic cigarettes (females: 9.9%, males: 13.8%).
- Hookah use in Oklahoma is fairly uncommon as compared to the nation. Overall, 4.0% of high school students currently use hookahs (females: 3.3%, males: 4.7%). This compares to 5.2% overall use in the nation (females: 4.8%, males: 5.6%).
- Snus is currently used by just 3.4% of high school students in Oklahoma (females: 1.3%, males: 5.4%). In the nation, it is used by 1.8% of students (females: 0.9%, males: 2.7%).

*Unweighted data is presented for Oklahoma high schools
