NEVER touch a BAT with your BARE HANDS!

Bats can have RABIES

You can't tell if a bat has rabies just by looking at it!

Any bat can have rabies, which is a DEADLY disease.

If a bat is down, it may be sick with rabies.

A bat that lets you touch it may be sick and bite you.

If you see a bat, DON'T TOUCH IT WITH YOUR BARE HANDS!
(Refer to our "I've Found a Bat..." infographic for instructions on how to safely capture and release.)
