RECOMMENDATIONS

GET ENOUGH SLEEP

Teens 13-18 years of age need 8 to 10 hours of sleep.¹

BE CONSISTENT

Try to go to bed and get up at the same times, including weekends.³

GET SOME EXERCISE

Being active during the day can help you fall asleep more easily at night.³

HAVE A CUT OFF TIME

Avoid caffeine containing drinks and medications (coffee, tea, soda/pop and chocolate) 4-6 hours before bedtime since caffeine acts as a stimulant and can reduce the quantity and quality of sleep.⁴

TURN THE SCREEN OFF

Reduce screen time, especially late in the evening, as blue light from televisions, computers, electronic notebooks, and smartphones can inhibit the release of sleep-inducing melatonin, increase alertness, and reset the body's circadian rhythm to a later schedule.²

A RELAXING ENVIRONMENT

Make sure the bedroom is quiet, dark, relaxing, and at a comfortable temperature.³

INTERFERENCE WITH SLEEP

Avoid eating, drinking, or exercising within a few hours of bedtime. Nicotine and alcohol also interfere with sleep.²

LATER START TIMES

Encourage schools to move toward later starting times (the AAP recommends ~ 8:30 a.m.), since research indicates that typical teens have trouble falling asleep before 11:00 pm and are best suited to awaken at 8:00 or later.⁵
