

Alcohol and other drug use

Among Oklahoma Public High School Students

What is the problem?

The 2017 Oklahoma Youth Risk Behavior Survey indicates that among public high school students:

Alcohol Use

- 66% have drunk alcohol
- 17% drank alcohol for the first time before 13 years of age
- 32% drank alcohol during the 30 days before the survey
- 14% drank five or more drinks in a row within a couple of hours during the 30 days before the survey
- 15% rode with a driver who had been drinking alcohol

Other Drug Use

- 33% have ever used marijuana
- 16% used marijuana during the 30 days before the survey
- 16% have taken a prescription pain medicine without a doctor's prescription
- 23% were offered, sold, or given an illegal drug on school property during the 12 months before the survey

What are the solutions?

- Reduce youth access to alcohol and other drugs by supporting local and state policies that restrict easy availability to adolescents.
- Train and utilize peer leadership groups, such as Students Against Destructive Decisions (SADD), 2Much2Lose (2M2L), and others.
- Educate students on the harmful effects alcohol has on their maturing minds and bodies and the consequences that could affect their future plans.
- Educate parents and community members about adolescent development and the effects of alcohol and drug use.
- Understand, follow, and promote enforcement of underage drinking laws such as “Social Host” and retailer compliance policies.
- Encourage schools to participate in surveys, such as the Youth Risk Behavior Survey (YRBS) and the Oklahoma Prevention Needs Assessment, that assess risk-taking behaviors among youth.
