Description of Amendment:

a. This is to incorporate the following:

Question: You'll see on the first page that somebody submitted a question about the minimum cementitious and water/cement ratio for the HES mixes. She referred the question to the 701 spec, but to my knowledge there are no HES mixes in there. Only the VES mixes. Do any of you guys have any different info about that?
Answer: Per the ODOT Materials Division: The same requirements hold true. High early usually just has more cement and a chemical accelerator. They still need to meet 701 for Class A and Class AA.

b. All other terms and conditions remain unchanged.
