

# **Oklahoma Uniform Building Code Commission**

September 15, 2020 - Commission Meeting

## **Agenda Item: 4-G**

Discussion and possible action to modify the scope of the Ice and Water Barrier Committee to include the commercial building requirements of the International Building Code® (IBC®) in addition to reviewing the requirements of the International Residential Code® (IRC®)

### **History:**

- At the November 2019, meeting the OUBCC determined a committee should be formed to review the Ice and Water Barrier Requirements for residential buildings.
- At the December 2019, meeting the OUBCC approved a slate of positions to review the 2015 International Residential Code, Ice and Water Barrier Technical Committee

### **Proposed Change to the Scope Assigned to the Committee:**

- Update the committee to review the issue for the 2018 IRC. Committees will be reviewing the 2018 IRC and any changes from this committee will amend the 2018 code during rulemaking, not the 2015.
- Include an evaluation of the commercial requirements for ice and water barriers in the 2018 IBC® to encompass all building requirements.
