

“Temporary Way To Bring Up A Property Record Card On Vista Or Windows 7 In CAMA”

Right now on the current CAMA System using Vista or Windows 7, this is what will happen if you try to bring up a Property Record Card in CAMA. (That is if the Net-frame, ADOBE, and PRC are installed properly in CAMA.)

The PDF file is actually in the F:\CAMA folder and can be brought up by setting up the following Icon.

To build an Icon like the one on the left, go to your Desktop screen and find a blank spot and right click with your mouse and chose NEW then Shortcut.

When the location window pops up, type the following: **F:\CAMA\PRC?????.PDF** for the location then click Finish.

????? = User Id (3rd column in the Password Table)

If you want you can right click on the Icon and rename it. You can also right click on it, and choose Properties, then Shortcut, then Change Icon and pick a different Icon design.
